# Authors

**Irvin K. Burbank** is an associate professor of elementary mathematics education and curriculum development at the University of Victoria. Dr. Burbank has taught in the Alberta school system and has served as a mathematics consultant.

**Richard Holmes** is a mathematics specialist with the Calgary Board of Education. Mr. Holmes received a B.Ed. degree from the University of Alberta and an M.S. in education from the University of Illinois.

## Consultants

**Gary Hatcher** is coordinator of mathematics and science for the Avalon Consolidated School Board, St. John's, Newfoundland. Mr. Hatcher is an experienced teacher of junior and senior high mathematics.

**Bill Hoppins** is principal of John Wilson Elementary School in Innisfail, Alberta. Mr. Hoppins' experience includes teaching elementary and junior high mathematics.

**Doug Super** is mathematics coordinator with the Richmond School Board in British Columbia. Mr. Super has a masters degree in mathematics from Simon Fraser University and is an experienced elementary teacher.

**Judith A. Threadgill** is a community college mathematics teacher. Dr. Threadgill's experience includes teaching and supervising elementary mathematics education students at the University of Calgary.

**M.E. Williamson** is a teacher with the Vancouver School Board. Ms. Williamson is a University of British Columbia graduate in education.

## PLACE VALUE

# Signposts

The numbers below represent highway distances in kilometres from Fredericton, New Brunswick.

Match them to the cities on the road signs.

1. 6674
2. 5739
3. 4598
4.  $4000 + 70$
5.  $3000 + 400 + 40 + 7$
6.  $500 + 7 + 2000 + 20$
7.  $6 + 500 + 80$
8. two hundred eighty
9. three hundred seventy-three
10. one thousand seven hundred seventy-seven

# Thousands and Millions

Canada's Forest Land  
323 296 000 ha (hectares)

## EXERCISES

Write in expanded form.

- 7062
- 3 075 021
- 417 120 000

Write in standard form.

- $600\ 000 + 70\ 000 + 3000 + 500 + 20 + 8$
- $7\ 000\ 000 + 70\ 000 + 4$
- $800\ 000\ 000 + 90\ 000\ 000 + 200$
- three hundred million thirty-three
- eighty-five million six thousand seven

Write the next five whole numbers.

- 1 000 000
- 22 287 562
- 5 409 389
- 99 999
- 99 999 999
- 281 999

Write the place value of the 7 in each numeral.

- 703 125
- 72 125 000
- 709 586 214

# PRACTICE

Write the place value of the underlined digit.

1. 72 056
2. 6 328 429
3. 48 964 307
4. 50 000 000
5. 795 162 004
6. 202 569 328

Write in standard form.

7. two million two thousand twenty-two
9. fifty-six million fifty-six
10. thirty-nine million three hundred

11. Canada's coastline is over two hundred forty-one thousand four hundred two kilometres long.
12. The Canada-United States boundary is eight thousand eight hundred ninety-two kilometres long.

Write the next four numerals in the pattern.

13. 116 000 000, 118 000 000, 120 000 000, ■, ■, ■, ■
14. 28 400 000, 28 600 000, 28 800 000, ■, ■, ■, ■
15. 99 850, 99 900, 99 950, ■, ■, ■, ■

# Billions

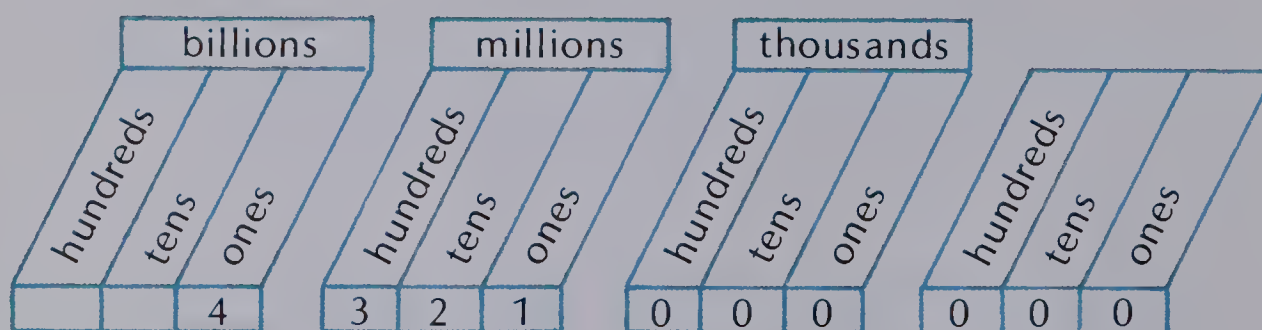

Canada's total population: 23 597 600

North America's total population: 363 000 000

World population: 4 321 000 000

The world population is in **billions** or thousands of millions. (In some countries, a billion is a million million.)

**Expanded form:**  $4\,000\,000\,000 + 300\,000\,000 + 20\,000\,000 + 1\,000\,000$

**Standard form:** 4 321 000 000

**Words:** four billion three hundred twenty-one million

## EXERCISES

Write in standard form.

1.  $3\,000\,000 + 472\,000 + 134$
2.  $4\,000\,000\,000 + 378\,000\,000 + 250$
3.  $75\,000\,000\,000 + 600\,000$
4.  $32\,000\,000\,000 + 568$
5. forty-three billion three hundred fifty-one thousand
6. five billion five million five thousand five
7. three hundred billion three hundred thousand three

Write in expanded form.

10. 121 234 428 000
11. 74 345 658 571
12. 9 980 000 000

# PRACTICE

Write the place value of the 4 in each numeral.

1. 3 743 625 000
2. 142 796 030 000
3. 473 562 000 000
4. 64 109 357 000

Write in standard form.

5. 577 000 000 000 + 235 000 000
7. 878 000 000 000 + 55 000
8. 22 000 000 000 + 101 000 000 + 404
9. 999 000 000 000 + 99 000 000 + 99
10. forty-six billion three hundred million
11. seventy-five billion seventy-five thousand seventy-five
12. three hundred forty-one billion nine thousand twelve

6.

Write the next three numerals in the pattern.

13. 41 500 000 000, 42 000 000 000, 42 500 000 000, ■, ■, ■.
14. 243 190, 245 190, 247 190, ■, ■, ■.
15. 8 175 260, 8 475 260, 8 775 260, ■, ■, ■.
16. 8 999 999 997, 8 999 999 998, 8 999 999 999, ■, ■, ■.

## Multiplying Magic

9. Write these dates in order starting with the earliest.

- 1837 Upper Canada Rebellion
- 1608 Champlain established Quebec City.
- 1885 Last spike driven for the CPR coast to coast.
- 1812 War of 1812
- 1750 Fort Toronto built
- 1949 Newfoundland became a province.
- 1534 Cartier discovered the Gulf of St. Lawrence.
- 1000 Canada seen for the first time by Norsemen.
- 1759 Battle of the Plains of Abraham
- 1858 Gold found in the sandbars of the Fraser River.
- 1867 Dominion of Canada is created.

10. Make a time line showing the above events in Canada's history.

## Number Search

Write 9-digit numerals. Use the digits 1 to 9 only once.

- a. the smallest number possible
- b. the largest number possible
- c. the smallest possible even number
- d. the smallest possible odd number
- e. the tenth largest even number

# Decimals Greater than One

What is the distance between Ottawa and Quebec City?

**Standard form:** 4.6

**Expanded form:**  $4 + 0.6$

**Words:** four **and** six tenths

The distance between Ottawa and Quebec City is 460 km.

## EXERCISES

Write as a decimal in standard form.

1.  $5 + 0.7$
2.  $30 + 8 + 0.4$
3.  $700 + 60 + 5 + 0.9$
4.  $8 + 0.3 + 0.05$

# Two- and Three-Place Addition

Sonia's family drove to the Calgary Stampede on their summer holidays. On the first day, they drove 776 km from Kenora, Ontario, to Regina, Saskatchewan. On the second day, they drove 764 km from Regina to Calgary.

What was the total distance they travelled?

$$776 + 764 = \blacksquare$$

Sonia's family travelled 1540 km to the Calgary Stampede.

# Adding Greater Numbers

The Perrins of Winnipeg went on holiday to Zurich, Switzerland. First they flew 1796 km to Montreal. After switching planes, they flew 5959 km on to Zurich.

How far did they fly to get to Zurich?

$$1796 + 5959 = \blacksquare$$

They flew 7755 km to get to Zurich.

# Addition with Money

For a ski holiday, Jason travelled from his home in Thunder Bay, Ontario, to Mont Tremblant, Quebec. He spent \$229.00 for air fare to Montreal, \$18.35 for bus fare to the lodge, and \$375.95 for food, lodging, and lift tickets.

What was the total cost of the trip?

$$\$229.00 + \$18.35 + \$375.95 = \blacksquare$$

Keep the decimal points in a line.

# Two- and Three-Place Subtraction

Noelle enjoyed being at a lake on her holidays in Rouyn, Quebec. She travelled 914 km by car from Quebec City to get there. Marie stayed near the ocean on her holiday in Yarmouth, Nova Scotia. She travelled 866 km by car from Quebec City to get there.

How much farther did Noelle go on her holidays?

$$914 - 866 = \blacksquare$$

Noelle went 48 km farther. *Check:*  $48 + 866 = 914$ .

# Solving Problems Mentally

Try to solve each problem mentally.

Write the answer for each.

1. If Judy has \$25, how many \$5 picture frames can she buy?  
a. 125                      b. 30                      c. 20                      d. 5
2. If Jim buys an old coin for \$3 and sells it for \$6, how much does he make?  
a. \$18                      b. \$9                      c. \$3                      d. \$2
3. If Pat earns \$20 in wages and \$5 in tips, how much money does she make?  
a. \$4                      b. \$15                      c. \$25                      d. \$100
4. If Mary buys 4 skirts for \$8 each, how much does she spend?  
a. \$2                      b. \$4                      c. \$12                      d. \$32
5. If Bill's mass is 60 kg and Jill is 30 kg lighter, what is Jill's mass?  
a. 20 kg                      b. 30 kg                      c. 60 kg                      d. 90 kg
6. If John is 40 years old and Sheila is 10 years older, what is Sheila's age?  
a. 30                      b. 40                      c. 50                      d. 60
7. What is the perimeter of a rectangular garden that is 5 m by 6 m?  
a. 11 m                      b. 30 m                      c. 22 m                      d. 60 m
8. If it is 10:00 now, what time will it be 10 h from now?  
a. 15:00                      b. 18:00                      c. 22:00                      d. 20:00
9. How many \$20 bills are needed to pay a debt of \$500?  
a. 25                      b. 20                      c. 15                      d. 30
10. What is the area of a rectangular room that is 3 m by 4 m?  
a. 7 m<sup>2</sup>                      b. 12 m<sup>2</sup>                      c. 15 m<sup>2</sup>                      d. 24 m<sup>2</sup>

## PRACTICE

Mentally compute the answers to these problems.

2. How much does a \$40 hotel room cost with a \$15 discount coupon?
3. How many tables of 4 are needed to seat 200 people at a dance?
4. If today is Wednesday, what day will it be 10 days from now?
5. If it is 9 A.M. now, what time will it be 50 hours from now?
6. What is the volume of a 2 m by 3 m by 4 m room?
7. How much change should you get from a \$5 bill when you are paying for a \$3.80 item?
8. What is the total cost of 99 tickets at 25¢ each?

29. \$6000 is shared by 75 people. How much does each person get?
30. 675 kg of potatoes are put into 45 sacks. How many kilograms does each sack hold?

## Cutting the Pie

What is the greatest number of pieces you could cut this pie into with 3 straight cuts?

Draw several circles and  
try a few different ways.

Try to cut a pie into 11 pieces with 4 straight cuts.

# Two-Digit Divisors

The Harrisons sold 38 of their pigs for \$4674. What was the price of each pig?

# Problem Solving Quiz

Try this quiz. Name the operation that gives the correct answer.

1. If a woman buys 12 baskets of apples for \$54, how much does each basket cost?  
a.  $\$54 + 12$     b.  $\$54 - 12$     c.  $\$54 \times 12$     d.  $\$54 \div 12$
2. A man buys 5 jugs of maple syrup at \$6 a jug. How much does he pay?  
a.  $\$6 + 5$     b.  $\$6 - 5$     c.  $\$6 \times 5$     d.  $\$6 \div 5$
3. Jane had \$49 in her wallet after she spent \$15 on meat. How much did she have at first?  
a.  $\$49 + \$15$     b.  $\$49 - \$15$     c.  $\$49 \times \$15$     d.  $\$49 \div \$15$
4. A farmers' market sold 6350 kg of potatoes in 10 kg bags. How many bags did they sell altogether?  
a.  $6350 + 10$     b.  $6350 - 10$     c.  $6350 \times 10$     d.  $6350 \div 10$
5. Peter had \$32 in his wallet. He then spent \$25 on groceries. How much was left?  
a.  $\$32 + \$25$     b.  $\$32 - \$25$     c.  $\$32 \times \$25$     d.  $\$32 \div \$25$
6. The parking lot at the market has 52 rows with space for 25 cars in each row. How many spaces are there altogether?  
a.  $52 + 25$     b.  $52 - 25$     c.  $52 \times 25$     d.  $52 \div 25$
7. If 3007 sales of sweet corn were made at the market during the month of July, what was the average number of sales per day?  
a.  $3007 + 31$     b.  $3007 - 31$     c.  $3007 \times 31$     d.  $3007 \div 31$
8. Mrs. Lorenz sold 243 bags of radishes last Saturday. This Saturday she sold 178. How many were sold altogether?  
a.  $243 + 178$     b.  $243 - 178$     c.  $243 \times 178$     d.  $243 \div 178$

## Fenced In

A nuclear power plant measures 120 m by 140 m.

The fence around it is 100 m from the outside walls.

How long is the fence?

# Area

The **area** of a figure is the measure of the surface it covers.

Area can be measured in **square metres ( $\text{m}^2$ )** or in **square centimetres ( $\text{cm}^2$ )**.

Each insulation panel is  $1 \text{ m}^2$  (one square metre).

Large areas, like fields, are measured in **hectares (ha)**.

$$1 \text{ ha} = 10\,000 \text{ m}^2$$

City Map

Very large areas, like whole cities or countries, are measured in **square kilometres ( $\text{km}^2$ )**.

## EXERCISES

Write the most appropriate unit for measuring each area.

| 9. city park                 | 10. the Great Lakes |

## PRACTICE

Copy and complete each sentence using the most appropriate unit for the area.

1. A page in this math book is about 600 ■.
2. A baseball park is about 1 ■.
3. A football field is about 6000 ■.
4. Prince Edward Island is about 5600 ■.

# Area Formulas

By counting squares:

$$\text{Area} = 12 \text{ cm}^2$$

There are 4 rows of 3 squares.

$$4 \times 3 = 12$$

For any rectangle:

$$\text{Area} = \text{Length} \times \text{Width}$$

or  $A = L \times W$

The area of the triangle is half the area of the rectangle.

$$\text{Area} = \frac{12}{2} \text{ cm}^2 = 6 \text{ cm}^2$$

For any triangle:

$$\text{Area} = \frac{\text{Base} \times \text{Height}}{2}$$

or  $A = \frac{B \times H}{2}$

## EXERCISES

What is the area of a rectangle with the following measurements?

1. Length = 5 cm  
Width = 4 cm

2.  $L = 28 \text{ cm}$   
 $W = 30 \text{ cm}$

3.  $L = 20 \text{ m}$   
 $W = 15 \text{ m}$

What is the area of a triangle with the following measurements?

4. Base = 5 cm  
Height = 4 cm

5.  $B = 15 \text{ cm}$   
 $H = 10 \text{ cm}$

6.  $B = 36 \text{ m}$   
 $H = 12 \text{ m}$

7.  $B = 24 \text{ km}$   
 $H = 18 \text{ km}$

8.  $B = 16 \text{ m}$   
 $H = 20 \text{ m}$

9.  $B = 25 \text{ cm}$   
 $H = 30 \text{ cm}$

## PRACTICE

What is the area of rectangle  $ABCD$ ?

1.  $DC = 8 \text{ cm}$   
 $BC = 20 \text{ cm}$
2.  $BC = 8 \text{ m}$   
 $DC = 55 \text{ m}$   
 $AB = 55 \text{ m}$

What is the area of triangle  $EFG$ ?

3.  $EG = 8 \text{ cm}$   
 $FG = 6 \text{ cm}$   
 $EF = 10 \text{ cm}$
4.  $EG = 15 \text{ cm}$   
 $FG = 10 \text{ m}$

Calculate each area.

11. a. What is the area of triangle  $STV$ ?
- b. What is the area of triangle  $TVR$ ?
- c. What is their total area?

Calculate each area.

## Solar Panels

1. What is the total area of the solar panel?
2. What is the area of the triangular support for the panel?

# Measuring Circles

The **circumference** is the distance around a circle.

The **area** of a circle can be estimated by counting squares.

$$\begin{aligned}\text{Circumference} &= \text{Diameter} \times 3.14 \\ &= 3 \times 3.14 \\ &= 9.42\end{aligned}$$

The circumference is 9.42 cm.

$$\begin{aligned}\text{Area} &= (\text{Radius})^2 \times 3.14 \\ &= 2 \times 2 \times 3.14 \\ &= 12.56\end{aligned}$$

The area is 12.56 cm<sup>2</sup>.

3.14 is the approximate value of a special number called **pi**.

## EXERCISES

1. Estimate the area by counting squares.
2. What is the radius?
3. Calculate the area.
4. What is the diameter?
5. Calculate the circumference.

## PRACTICE

Calculate the circumference of a circle with each diameter.

# Volume

The **volume** of a solid is the measure of the space it occupies.

The number of cubic centimetres in a box is a measure of its **volume**.

one cubic centimetre  
 $1 \text{ cm}^3$

This box is:  
5 cm high,  
4 cm long,  
3 cm wide.

The box contains 5 layers.

Each layer has  $4 \times 3$  or 12 centimetre cubes.

Its volume is  $5 \times (4 \times 3) = 5 \times 12$   
 $= 60 \text{ cm}^3$ .

Volume = Length  $\times$  Width  $\times$  Height  
 $V = L \times W \times H$

Volume can also be measured  
in **cubic decimetres** ( $\text{dm}^3$ )  
or in **cubic metres** ( $\text{m}^3$ ).

## EXERCISES

Calculate the volume of each box.

1. Length = 5 cm  
Width = 4 cm  
Height = 2 cm

2.  $L = 2 \text{ cm}$   
 $W = 2 \text{ cm}$   
 $H = 2 \text{ cm}$

3.  $L = 5 \text{ m}$   
 $W = 3 \text{ m}$   
 $H = 2 \text{ m}$

4. Length = 4 m  
Width = 3 m  
Height = 5 m

5.  $L = 5 \text{ dm}$   
 $W = 2 \text{ dm}$   
 $H = 4 \text{ dm}$

8. How many cubic metres of air are there in a room 7 m wide, 3 m high, and 10 m long?
9. What is the volume of a wood-burning stove that is 1 m long, 40 cm wide, and 5 dm high?

## Crow's Nest Pass

Three coal cars are each 3 m wide and 2 m high.

Attached end-to-end, they are 26 m long altogether.

There is 1 m between cars.

What is the volume of one coal car?

# Mass

$$1 \text{ kg} = 1000 \text{ g}$$

**One tonne (1 t)** is 1000 kg.

A cubic metre of coal has a mass of about 1 t (one tonne).

## EXERCISES

Which unit? Use the symbols g, kg, or t.

Object	Mass
1. dime	3 ■
2. hammer	1 ■
3. football player	100 ■

Which is heavier: a brontosaur and 4 tyrannosaurs or a brachiosaur?

## Big Heat

One tonne of uranium can produce as much heat as 3 million tonnes of coal.

Canadian mines produce about 6000 t of uranium a year.

- How much coal would have to be mined to get the same amount of energy?
- About 25 million tonnes of coal is mined in Canada each year. How long would it take to mine the amount of coal in Question 1?

# Capacity

**Capacity** is the measure of how much an object holds. The **litre (L)** is used to measure liquid **capacity**.

There are **1000 millilitres (mL)** in a litre.

$$\begin{aligned} 1000 \text{ mL} &= 1 \text{ L} \\ 1 \text{ mL} &= 0.001 \text{ L} \end{aligned}$$

Large amounts of liquid can be measured in **kilolitres (kL)**.

$$1 \text{ kL} = 1000 \text{ L}$$

## EXERCISES

Which unit would be most appropriate to measure each capacity: litre, millilitre, or kilolitre?

- How many truckloads are needed to fill the storage tank?
- How many car gas tanks can be filled if an average tank holds 40.0 L?

# Mass, Capacity, and Volume

This cube of water at 4°C has very special properties.

It measures 1 dm or 10 cm on each side.

Its **volume** is 1 dm<sup>3</sup> or 1000 cm<sup>3</sup>.

Its **mass** is 1 kg.

Its **capacity** is 1 L.

1 cm<sup>3</sup> of water has a mass of 1 g and a capacity of 1 mL.

## EXERCISES

Oil	920 g
Turpentine	870 g
Sea water	1025 g

## How Heavy is the Air?

A scientist used a very accurate balance to measure the mass of air.

She found that a one-litre jar filled with air had a total mass of 528.675 g.

She then took the air out of the jar with a vacuum pump.

After the air was pumped out, the jar had a mass of 527.382 g.

How heavy is a litre of air?

# Multiples and the LCM

As we count by 4s, we name the **multiples** of 4.

As we count by 5s, we name the **multiples** of 5.

The multiples of 4 are: 4, 8, 12, 16, 20, 24, 28, 32, 36, 40, ...

The multiples of 5 are: 5, 10, 15, 20, 25, 30, 35, 40, ...

The common multiples of 4 and 5 are: 20, 40, ...

The **Least Common Multiple (LCM)** is 20.

## EXERCISES

Write the next seven multiples.

- 3, 6, 9, ■, ■, ■, ...
- 4, 8, 12, ■, ■, ■, ...
- 6, 12, 18, ■, ■, ■, ...
- 10, 20, 30, ■, ■, ■, ...
- Write the first ten multiples of 7.
- Write the next four multiples of 5 after 35.
- Write the multiples of 2 between 16 and 32.

Copy the multiples. What is the LCM?

- |                        |                       |

# Divisibility Rules

**2**

A number is divisible by 2,  
if its last digit is 0, 2, 4, 6, or 8.

$$\begin{array}{r} 2090 \\ 2 \overline{)4180} \\ \underline{1} \phantom{0} \end{array}$$

**3**

A number is divisible by 3,  
if the sum of its digits  
is divisible by 3.

$$\begin{array}{r} 541 \\ 3 \overline{)1623} \\ \underline{1} \phantom{0} \end{array}$$

**4**

A number is divisible by 4,  
if the number formed by its last two digits  
is divisible by 4.

$$\begin{array}{r} 254 \\ 4 \overline{)1016} \\ \underline{2} \phantom{1} \end{array}$$

**5**

A number is divisible by 5,  
if its last digit is 0 or 5.

$$\begin{array}{r} 347 \\ 5 \overline{)1735} \\ \underline{2} \phantom{3} \end{array}$$

**6**

A number is divisible by 6,  
if it is divisible by 2 and by 3.

$$\begin{array}{r} 937 \\ 6 \overline{)5622} \\ \underline{2} \phantom{4} \end{array}$$

**9**

A number is divisible by 9,  
if the sum of its digits is  
divisible by 9.

$$\begin{array}{r} 379 \\ 9 \overline{)3411} \\ \underline{7} \phantom{8} \end{array}$$

**10**

A number is divisible by 10,  
if its last digit is 0.

$$\begin{array}{r} 715 \\ 10 \overline{)7150} \\ \underline{1} \phantom{5} \end{array}$$

## EXERCISES

Which number is **evenly** divisible?

Find its quotient.

1. by 5: 610 **or** 612

2. by 10: 642 **or** 640

3. by 2: 313 **or** 314

4. by 4: 534 **or** 536

5. by 3: 840 **or** 842

6. by 9: 693 **or** 683

7. by 6: 482 **or** 483

8. by 6: 424 **or** 432

# Factors and the GCF

Multiplications with a product of 14.

$$\begin{aligned} 14 &= 1 \times 14 \\ 14 &= 2 \times 7 \end{aligned}$$

The **factors** of 14 are: 1, 2, 7, 14

Multiplications with a product of 20.

$$\begin{aligned} 20 &= 1 \times 20 \\ 20 &= 2 \times 10 \\ 20 &= 4 \times 5 \end{aligned}$$

The **factors** of 20 are: 1, 2, 4, 5, 10, 20

Factors of 14: 1, 2, 7, 14

Factors of 20: 1, 2, 4, 5, 10, 20

14 and 20 have two **common** factors, 1 and 2.

The **Greatest Common Factor (GCF)** of 14 and 20 is 2.

# Prime and Composite Numbers

19 is divisible only  
by 1 and 19.

The factors of 19 are: 1, 19.

When a number has  
**only two factors**, it is  
called a **prime number**.

25 is divisible by  
1, 5, and 25.

The factors of 25 are:  
1, 5, 25.

When a number has  
**more than two factors**,  
it is called a  
**composite number**.

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20

15. a. Write all of the prime numbers less than 20.  
b. Write all of the composite numbers less than 20.  
c. Write all of the prime numbers greater than 20 but less than 30.

## PRACTICE

Is the number prime or composite?

- |         |         |         |         |

21. Write the prime numbers between 20 and 50.
22. Write the composite numbers between 30 and 45.

Solve.

23. Which number of gum drops is impossible to share evenly with other people: 57 or 59?
24. Which number of books couldn't you share equally with friends: 12 or 13?
25. What is the largest prime less than 21?
26. What is the smallest prime greater than 49?
27. Which divisibility rule shows that 171 is not prime?
28. Which divisibility rule shows that 51 is composite?

## Twin Primes

Prime numbers that have a difference of 2 are called **twin primes**.

Can you find the other seven twin primes that are less than 100?

# Prime Factors

The factors of 72 are: 1, 2, 3, 4, 6, 8, 9, 12, 18, 24, 36, 72.

Only 2 and 3 are **prime** numbers.

The **prime factors** of 72 are: 2, 3.

The **prime factors** of 72 can be found using a **factor tree**.

Any number can be written as a product of its prime factors.

$$72 = 2 \times 2 \times 2 \times 3 \times 3$$

$$= 2^3 \times 3^2$$

The prime factors can be multiplied to find other factors.

For example,  $2 \times 2 \times 3 = 12$  is a factor of 72.

## EXERCISES

6. 30

Rewrite using exponents.

7.  $3 \times 3 \times 2 \times 2$

8.  $2 \times 2 \times 5$

9.  $7 \times 7 \times 2 \times 2 \times 2$

Use a factor tree to find the prime factors. Write the product using exponents.

10.

11.

## PRACTICE

Use a factor tree to write the number as a product of prime factors.  
Write the answer without using exponents.

- |       |       |       |       |

# Order of Operations

Use Rule 1 to *simplify* number expressions.

$$\begin{aligned}45 - 6 \div 2 \\&= 45 - 3 \\&= 42\end{aligned}$$

$$\begin{aligned}38 + 9 \times 2 - 6 + 2 \\&= 38 + 18 - 6 + 2 \\&= 56 - 6 + 2 \\&= 50 + 2 \\&= 52\end{aligned}$$

## EXERCISES

Copy and simplify the expression.

$$\begin{aligned}1. \quad &68 + 9 \times 3 \\&= 68 + \blacksquare \\&= \blacksquare\end{aligned}$$

$$\begin{aligned}2. \quad &49 - 2 \times 4 + 6 \\&= 49 - \blacksquare + 6 \\&= \blacksquare + 6 \\&= \blacksquare\end{aligned}$$

$$\begin{aligned}3. \quad &25 \div 5 + 6 - 4 \\&= \blacksquare + 6 - 4 \\&= \blacksquare - 4 \\&= \blacksquare\end{aligned}$$

$$\begin{aligned}4. \quad &15 - 3 \div 1 + 2 \\&= 15 - \blacksquare + 2 \\&= \blacksquare + 2 \\&= \blacksquare\end{aligned}$$

$$\begin{aligned}5. \quad &27 + 4 - 8 \div 2 \\&= 27 + 4 - \blacksquare \\&= 31 - \blacksquare \\&= \blacksquare\end{aligned}$$

$$\begin{aligned}6. \quad &60 + 16 \div 4 - 4 \\&= 60 + \blacksquare - 4 \\&= \blacksquare - 4 \\&= \blacksquare\end{aligned}$$

$$7. \quad 46 - 3 + 2$$

$$8. \quad 97 + 6 \div 2$$

$$9. \quad 7 + 5 \times 3 - 6$$

$$10. \quad 18 \div 2 + 4 \times 3$$

## PRACTICE

Copy and simplify the expression.

1.  $35 + 6 \times 3$
2.  $15 \div 5 - 2$
3.  $27 - 6 + 4$
4.  $18 \div 3 \div 2$
5.  $90 - 48 \div 6$
6.  $35 + 7 \times 4$
7.  $12 \times 2 \div 8$
8.  $16 + 12 - 3$
9.  $16 - 2 + 3 \times 3$
10.  $9 \times 8 - 4 + 2$
11.  $79 + 42 \div 7 - 18$
12.  $150 - 10 + 5 \times 2$
13.  $16 \div 2 + 25 \div 5$
14.  $84 - 6 \times 6 + 6$
15.  $15 + 2 \times 2 + 3$
16.  $60 - 4 + 9 \div 3$
17.  $18 \times 10 + 35 \div 7$
18.  $24 + 28 \div 4 - 2$
19.  $73 - 20 \div 4 + 1$
20.  $32 + 38 - 6 \div 6$

Write the expression.

21. four minus three times one
22. twenty-five divided by five plus six
23. the difference of six times eight and seventeen
24. the sum of fifty-two and thirty divided by ten
25. the difference of two times three and ninety times three
26. the difference of nine times two and nine times eleven

## USING THE CALCULATOR

Use a calculator to find the answer.

a.  $5001 - 3584 + 2072 \div 37$

b.  $157 - 30\ 174 \div 321 + 168$

c.  $7934 + 6526 - 1487$

d.  $302 + 1050 \div 14 - 866$

e.  $48 \times 52 - 1081 \div 47$

# Order of Operations

Use Rule 2 to simplify number expressions.

$$\begin{aligned} 50 \times 2 + 3 \\ = 100 + 3 \\ = 103 \end{aligned}$$

$$\begin{aligned} 50 \times (2 + 3) \\ = 50 \times 5 \\ = 250 \end{aligned}$$

Compare.

$$\begin{aligned} 16 + 4 - 5 + 8 \\ = 23 \end{aligned}$$

$$\begin{aligned} (16 + 4) - (5 + 8) \\ = 20 - 13 \\ = 7 \end{aligned}$$

Compare.

## EXERCISES

Copy and simplify the expression.

$$\begin{aligned} 1. \quad & 8 \times (15 + 25) \\ & = 8 \times \blacksquare \\ & = \blacksquare \end{aligned}$$

$$\begin{aligned} 2. \quad & 86 + (65 - 35) \\ & = 86 + \blacksquare \\ & = \blacksquare \end{aligned}$$

$$\begin{aligned} 3. \quad & (67 + 80) \times (6 - 5) \\ & = \blacksquare \times \blacksquare \\ & = \blacksquare \end{aligned}$$

$$\begin{aligned} 4. \quad & (89 - 20) \div (12 - 9) \\ & = \blacksquare \div \blacksquare \\ & = \blacksquare \end{aligned}$$

$$\begin{aligned} 5. \quad & 42 \times (15 - 7) \\ & = 42 \times \blacksquare \\ & = \blacksquare \end{aligned}$$

$$\begin{aligned} 6. \quad & 100 \div (19 - 15) \\ & = 100 \div \blacksquare \\ & = \blacksquare \end{aligned}$$

$$\begin{aligned} 7. \quad & (16 + 4) \times (8 - 2) \\ & = \blacksquare \times \blacksquare \\ & = \blacksquare \end{aligned}$$

$$\begin{aligned} 8. \quad & (25 + 9) \div (60 - 43) \\ & = \blacksquare \div \blacksquare \\ & = \blacksquare \end{aligned}$$

$$9. \quad 11 + (40 - 25)$$

$$10. \quad (9 + 3) \div (8 - 4)$$

$$11. \quad 72 \div (14 - 5)$$

$$12. \quad (16 - 8) \times (24 + 6)$$

## PRACTICE

Simplify each expression.

1.  $3 \times (15 - 4)$
2.  $(60 + 90) \div (6 - 2)$
3.  $(8 \div 4) \times (95 - 25)$
4.  $8 \times (50 - 40)$
5.  $150 \div (72 \div 12)$
6.  $(44 - 24) \times (35 - 15)$
7.  $(56 - 34) \times (126 + 74)$
8.  $600 \div (285 + 15)$
9.  $486 \times (85 - 85)$
10.  $(21 - 21) \times (21 - 21)$
11.  $592 \times (793 - 793)$
12.  $(2 \times 72) \div (720 \div 5)$
13.  $(46 \div 2) \times (18 - 18)$
14.  $847 \div (11 \times 11)$

Simplify. Use  $<$ ,  $=$ , or  $>$ .

15.  $88 \times (8 - 8)$  ■  $8 + 8 + 8 - 8$
16.  $(6 \div 6) \times (6 - 6)$  ■  $6 \div 6 - 6 \div 6$
17.  $4 - 4 + 4$  ■  $4 \times (4 \div 4)$
18.  $7 \times 7 - (7 - 7)$  ■  $77 - (7 + 7)$
19.  $(9 \times 9) \div (9 \times 9)$  ■  $9 \times (99 \div 99)$
20.  $3 \times (33 - 33)$  ■  $3 \times 3 - (3 + 3)$

Write the expression.

21. two times the sum of 14 and 22
22. nine times the difference between 150 and 127
23. the sum of 6 and 9 divided by the difference between 31 and 28
24. one hundred times the difference of 6 and 5
25. seventeen times the sum of 20 and 3

## Four Fives

Can you write 10 number expressions, using only four fives, that equal the numbers 1 through 10?

Here's an example for 10:

$$(5 + 5) - (5 - 5) = 10$$

# Solving Equations

$N - 9 = 16$  is an equation. It is read as:  
"Some number minus 9 equals 16."

Use the **opposite flowchart** to find the **opposite equation**.

$16 + 9 = N$  is the opposite equation of

$N - 9 = 16$ .

$$N = 25$$

25 solves the equation  $N - 9 = 16$ .

To check, replace  $N$  with 25:  $25 - 9 = 16$ .

# Equivalent Fractions

24 members are in the chorus.

$\frac{1}{8}$  of them wear glasses.

How many wear glasses?

One way to solve this is by finding an **equivalent fraction**.

$$\frac{1}{8} = \frac{1 \times 3}{8 \times 3} = \frac{3}{24}$$

Three members of the chorus wear glasses.

To find an equivalent fraction, multiply both the numerator and denominator by the same number.

# Simplifying Fractions

To find a simpler equivalent fraction, **divide** the numerator and denominator by the same number.

$$\frac{8}{12} = \frac{8 \div 2}{12 \div 2} = \frac{4}{6}$$

To find an equivalent fraction in simplest terms, use the GCF (Greatest Common Factor) as the divisor.

The factors of 8 are: 1, 2, 4, 8.

The factors of 12 are: 1, 2, 3, 4, 6, 12.

The GCF of 8 and 12 is 4.

$$\frac{8}{12} = \frac{8 \div 4}{12 \div 4} = \frac{2}{3}$$

$\frac{8}{12}$  of the instruments are violins.

Answer using a fraction in simplest terms.

30. There were 23 players at band practice.

Four players were absent.

There are 9 trumpets in the band.

What fraction of the band play trumpet?

## Odd Fractions

Ellen discovered an easy way to simplify fractions.

Study these:

$$\frac{\cancel{26}}{\cancel{65}} = \frac{2}{5} \quad \frac{\cancel{19}}{\cancel{95}} = \frac{1}{5}$$

Does Ellen's method always work?

$$\frac{\cancel{14}}{\cancel{43}} \text{ does not equal } \frac{1}{3}.$$

**Danger!**

Does the shortcut work for these?

$$\frac{16}{64}, \frac{17}{75}, \frac{17}{72}, \frac{13}{35}, \frac{13}{39}, \frac{49}{98}, \frac{12}{21}, \frac{12}{24}$$

# Comparing Fractions

Which is greater,  $\frac{2}{5}$  or  $\frac{3}{10}$ ?

$$\frac{2}{5} = \frac{2}{5} \begin{array}{c} \times 2 \\ \times 2 \end{array} = \frac{4}{10}$$

$$\frac{4}{10} > \frac{3}{10} \text{ so, } \frac{2}{5} > \frac{3}{10}$$

Compare fractions with the same denominator.

$$\frac{2}{5} = \frac{4}{10} > \frac{3}{10}$$

$$\text{So } \frac{2}{5} > \frac{3}{10}$$

# Fractions and Decimals

A survey of the Grade 6 class showed that  $\frac{2}{5}$  of the students play an instrument and  $\frac{5}{8}$  of the students would like to be in the school band. Express these fractions as decimals.

## Method 1

Change to a fraction in tenths or hundredths. Then write as a decimal.

$$\frac{2}{5} = \frac{2 \times 2}{5 \times 2} = \frac{4}{10}$$

$$\frac{4}{10} = 0.4$$

## Method 2

Divide.

$$\begin{array}{r} 0.625 \\ 8 \overline{) 5.000} \\ \underline{-48} \phantom{00} \\ 20 \phantom{00} \\ \underline{-16} \phantom{00} \\ 40 \phantom{00} \\ \underline{-40} \phantom{00} \\ 0 \end{array}$$

## EXERCISES

39. A survey of 20 students showed that  $\frac{3}{4}$  of the students had at least one record.  $\frac{3}{5}$  had at least two records and  $\frac{7}{20}$  had more than five. Write the survey results in decimal form.

## What's the Score?

Take a survey of the musical interests of 8 students.

Express the results in decimal form in a chart.

Do you like to sing? Do you play a musical instrument?

What instrument do you play? Would you like to be in a band or orchestra?

Would you like to sing in a musical performance?

# Part of a Set

$\frac{1}{3}$  of the instruments in the orchestra are woodwinds.

$$\frac{1}{3} \text{ of } 15 \quad \text{or} \quad \frac{1}{3} \times 15 \text{ equals } \frac{15}{3} = 5$$

5 of the instruments are woodwinds.

# Problem Solving

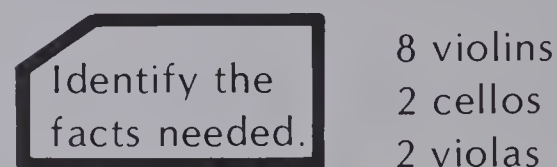

There are 35 students in Grade 6. They sold 350 tickets for the spring concert. How much money did they make?

An ensemble has 8 violins, 3 clarinets, 2 cellos, 2 flutes, 1 oboe, 2 violas, and a French horn. How many stringed instruments does it have?

**Too much information!**

$$8 + 2 + 2 = 12$$

The ensemble has 12 stringed instruments.

## EXERCISES

Is there too much information, just enough information, or not enough information?

1. Butter tarts sell for \$3.50 a dozen. What is the price of 12 butter tarts packed in 4 rows of 3?
2. How much does it cost to buy 5 pairs of tickets to the school dance?
3. What is the cost of a dozen paperback books if each book costs \$1.95?
4. Potatoes cost 30¢/kg. How much does it cost to buy a 5 kg bag containing 20 potatoes?
5. An antique store owner sold a violin for \$50 and bought it back for \$30. Then she resold it for \$40. What is her net gain or loss on the violin?

## PRACTICE

Solve only the problems which have all the facts needed.

1. Last Saturday 480 people attended a band concert in Nelson. If everyone came by car, how many cars were in the parking lot?
2. Fanny rents her flea market space for \$15 a square metre. How much area should she pay for if her booth is 3 m high, 2 m wide, and 4 m long?
3. Markham High School held their annual concert and charged \$2 admission for adults and \$1 admission for children. How many adults and children attended the concert if the total receipts were \$300?
4. Over a weekend, Cindy's Record Shop sold \$1278 worth of records to 120 people and made a profit of \$356. She sold 165 LPs and 38 singles. How much did it cost to run the store for the weekend?

Three fourths of 22 thousand railway workers voted against having a strike. How many thousand railway workers is that?

$$\frac{3}{4} \text{ of } 22 = \blacksquare$$

or

$$\frac{3}{4} \times 22 = \frac{3 \times 22}{4} = \frac{66}{4} = 16\frac{2}{4} = 16\frac{1}{2}$$

22 thousand workers

each  represents  
1000 railway workers

$16\frac{1}{2}$  thousand (or 16 500) railway workers voted against the strike.

- h.  $\frac{\blacksquare}{11} \times 2 = 4$
- i.  $\frac{\blacksquare}{11} \times 2 = 0$

# Multiplying Fractions

Acme Construction was contracted to build a football stadium.

$\frac{3}{4}$  of the seats are to be between the goal lines.

$\frac{2}{3}$  of **those** seats are to be covered by a roof.

What fraction of all the seats will be covered?

The diagram shows the area covered by the roof is  $\frac{6}{12}$  or  $\frac{1}{2}$ .

We could find this area by multiplying.

$$\frac{2}{3} \times \frac{3}{4} = \frac{2 \times 3}{3 \times 4} = \frac{6}{12} = \frac{1}{2}$$

# Multiplying With Mixed Numerals

Fractions are often used to describe stock market values in dollars.

What is the cost of 9 shares of stock if one share is listed at  $3\frac{3}{4}$ ?

$$9 \times 3\frac{3}{4} = 9 \times \frac{15}{4} = \frac{9 \times 15}{4} = \frac{135}{4} = 33\frac{3}{4}$$

The stock costs  $33\frac{3}{4}$  dollars or \$33.75.

On May 1, one share of a stock was listed at  $3\frac{3}{8}$ .

By July 31, the value of one share dropped to  $\frac{2}{3}$  of this amount.  
What is the new value?

$$\frac{2}{3} \times 3\frac{3}{8} = \frac{2}{3} \times \frac{27}{8} = \frac{2 \times 27}{3 \times 8} = \frac{54}{24} = 2\frac{6}{24} = 2\frac{1}{4}$$

The new value is  $2\frac{1}{4}$ .

# Formulas

A special number called **pi** was discussed on page 106.

Pi is often approximated by a fraction.

Pi is about  $\frac{22}{7}$ .

Pi is used in calculations involving circles.

$C$  = Circumference

$R$  = Radius

$D$  = Diameter

$A$  = Area

Using letters for measurements of parts of a circle, we can write **formulas** for area and circumference.

$$A = \pi \times R^2$$

$$C = \pi \times D$$

## EXERCISES

1. What is the circumference of a circle with a diameter of 7 cm?
2. What is the area of a circle with a radius of 7 cm?
3. What is the circumference of a circle with a radius of 3.5 cm?
4. What is the area of a circle with a diameter of 14 cm?
5. Write a formula that shows the radius **in terms of** the diameter.
6. Write a formula that shows the diameter **in terms of** the radius.

## PRACTICE

Area of a Triangle

$$A = \frac{1}{2} \times B \times H$$

Volume of a Sphere

$$V = \frac{4}{3} \times \pi \times R^3$$

Solve these problems using the formulas above.

1. What is the area of a triangle with a base of 4 cm and a height of 3 cm?
2. What is the volume of a sphere with a **radius** of 1 cm?
3. What is the area of a triangle with a base of 5 cm and a height of 4 cm?

4. Which has a greater volume, the box or the sphere?

5. Which has a greater volume, the box or the sphere?

## Combinations

- Use six 9s to write an expression for 100.
- Use five 5s to write an expression for 100.
- Use eight 7s to write an expression for 100.

Here is one solution:

$$9 \times 9 + 9 + 9 + \frac{9}{9} = 100.$$

# Multiplying Decimals

This year 6.9 thousand people attended a math convention in Winnipeg. Next year, the organizers expect 2.2 times as many people in Toronto. How many people do they expect to come next year?

24	10	2	20
24	9	3	27
24	8	4	32
24	7	5	35
24	6	6	36

The trainer arranged the hurdles in a square with 6 hurdles on each side.

## EXERCISES

- Find the rectangular arrangement of 34 hurdles that gives the largest possible area.
- Find the smallest perimeter of a rectangle that has an area of  $48 \text{ cm}^2$ . Each side must be an exact number of centimetres in length.
- How many squares are there in the diagram?
- How many rectangles are there in the diagram?

# Price Rates

Marion Blue grass seed sells for four dollars **per** kilogram. What is the cost of 3 kg of grass seed?

The **rate** is

$\$4/\text{kg}$   
four dollars **per** kilogram

1 kg costs \$4.

3 kg cost  $3 \times \$4 = \$12$ .

## EXERCISES

Write the rate using symbols.

1. \$25 **per** hour
2. \$7.35 **per** kilogram
3. \$1.29 **per** metre
4. \$0.45 **per** litre
5. \$18 **per** square metre
6. \$500 **per** week

Find the cost.

7. 4 boxes at \$4.50 per box
8. 6 cans at \$3.95 per can
9. 18 m at 65¢/m
10. 8 L at \$0.85/L
11. 100 m<sup>2</sup> at \$25/m<sup>2</sup>
12. 5 h at \$2.50/h

Find the cost of one.

13. 3 kg for \$9
14. 3 cans for 87¢
15. \$32 for 8 h work
16. 4 for \$4
17. 3 boxes for \$3.30
18. 36 m<sup>2</sup> for \$720
19. 6 cases cost \$88.50
20. 8 t cost \$2200

Copy and complete the table.

# Speed

The commuter train travels at a rate of 105 kilometres **per** hour. How far could the commuter train travel in six hours?

The **speed** is

105 km/h

kilometres per hour

In 1 h, the train travels 105 km.

In 6 h, it could travel  $6 \times 105 \text{ km} = 630 \text{ km}$ .

## EXERCISES

Write the speed using symbols.

1. 88 kilometres **per** hour
2. 2.5 metres **per** second
3. 565 kilometres **per** day
4. 40 kilometres **per** hour

Find the distance travelled.

5. At 70 km/h, how far does a car travel in 3 h?
6. At 8 km/h, how far does a cyclist ride in 5 h?
7. At 18 m/s, how far does a train travel in 7 s?

Find the speed.

8. 450 km in 5 h (kilometres **per** hour)
9. 2000 m in 8 min (metres **per** minute)
10. 100 m in 10 s (metres **per** second)
11. 750 km in 15 h (kilometres **per** hour)

Copy and complete the table for an airplane travelling at a steady speed of 550 km/h.

12.

Time (h)	1	2	3	4	5	6
Distance (km)	550					

## PRACTICE

Find the distance travelled.

1. At 75 km/h, how far could a car travel in 4 h?
2. At 330 m/s, how far does sound travel in a minute?
3. At 30 000 000 000 cm/s, how far does light travel in a minute?

Find the speed.

4. 15 m in 3 s (metres per second)
5. 2500 km in 4 h (kilometres per hour)
6. 4 km in 2 min (kilometres per minute)

Solve.

7. An Olympic swimmer swam 100 m in 50 s. What was her average speed in metres per second?
8. A long distance runner ran 10 000 m in about 25 min.
  - a. What was his average speed in metres per minute?
  - b. What was his average speed in metres per hour?
  - c. What was his average speed in kilometres per hour?
9. Melba is making plans for a trip to Halifax. The total distance is 1830 km. Suppose she averages about 80 km/h and drives for about 8 h every day.  
How many days will the trip take?
10. A cross-country skier went 30 000 m in 1 h 30 min.  
What was his average speed in kilometres per hour?

## Heart Beats

The human heart beats about 70 times per minute. How many times would it beat per year at the same rate?

# Ratio

**Ratio** is a comparison of numbers.  
The **ratio** of the number of fish in the small tank to the number of fish in the large tank is 4 to 9.

This is often written as **4:9** or  $\frac{4}{9}$ .

## EXERCISES

Use the above picture. Write these ratios.

- the number of snails in the large tank to the number of snails in the small tank

4 to ■ or 4:■ or  $\frac{4}{\blacksquare}$

- the height of the small tank to the height of the large tank

■ to 40 or ■:40 or  $\frac{\blacksquare}{40}$

- the length of the small tank to the length of the large tank

■ to ■ or ■:■ or  $\frac{\blacksquare}{\blacksquare}$

- the total number of snails to the total number of fish

Write each ratio in fraction form.

- 2 to 1
- 1 to 2
- 9:5
- 5:9
- 8:5

Write each fraction in the ratio form (■:■).

- $\frac{2}{3}$
- $\frac{3}{2}$
- $\frac{4}{1}$
- $\frac{6}{5}$
- $\frac{4}{7}$

Write the ratio of

- As to Bs
- Bs to Cs
- As to Cs
- As to total number of letters

## PRACTICE

Write the ratio to compare the numbers of objects.

- |   |                          |
|---|--------------------------|
| 1. M M N N M M N  | Ns to Ms                 |
| 2. 1 2 2 1 2 2 1 2 2 1 1  | 1s to 2s                 |
| 3. $\diamond \diamond \diamond \diamond \diamond \diamond \diamond \bigcirc \bigcirc$ | $\diamond$ to $\bigcirc$ |
| 4. 12 books, 1 box  | books to boxes           |
| 5. 8 girls, 11 boys   | boys to people           |
| 6. 2 dogs, 5 cats   | dogs to cats             |
| 7. 11 bananas, 15 apples  | bananas to fruit         |
| 8. 6 cookies, 7 brownies  | brownies to cookies      |

Solve.

9. There are 23 men and 27 women in a fitness club. What is the ratio of men to women?
  
10. A recipe calls for 2 L of ginger ale, and 5 L of fruit juice. What is the ratio of the amount of ginger ale to the amount of liquid?
  
11. Marta wrote a math test with 20 questions. She got 17 correct answers. Write these ratios.
  - a. correct answers to test questions
  - b. wrong answers to test questions
  - c. wrong answers to correct answers

## Area Ratios

We can show comparisons of *three* numbers in ratio form. The ratio of the lengths of the sides of the squares is:

4:2:1 or 4 to 2 to 1.

What is the ratio of the areas of the three squares?

# Equivalent Ratios

In planning a neighbourhood picnic, Mr. Albright decided to take 2 L of milk for every 5 children.

The ratio of litres of milk to the number of children is 2 to 5.

2 L for 5 children  
4 L for 10 children  
8 L for 20 children

$$\frac{2}{5} \xrightarrow{\times 2} \frac{4}{10}$$

$$\frac{2}{5} \xrightarrow{\times 2} \frac{4}{10}$$

He also planned to bring 6 beach balls for 10 children.

6 balls for 10 children  
3 balls for 5 children

$$\frac{6}{10} \xrightarrow{\div 3} \frac{3}{5}$$

$$\frac{6}{10} \xrightarrow{\div 3} \frac{3}{5}$$

Two **equivalent ratios** make a **proportion**.

$$2:5 = 4:10$$

$$\frac{2}{5} = \frac{4}{10}$$

$$6:10 = 3:5$$

$$\frac{6}{10} = \frac{3}{5}$$

## EXERCISES

Write a pair of ratios for each picture.

Apples are selling for 2 for 25¢.

27. How many can you buy for 50¢? 75¢? \$1.00?
28. What is the cost of 12 apples?
29. What is the cost of one apple?

## Proportional Drawings

Draw an enlargement of each figure using grid paper.  
Make the sides 3 times longer.

Compare the areas of the new figures to the originals.

# Proportion Problems

The sale price of shrubs is 2 for \$29.  
What will be the cost of 10 shrubs?

Write a proportion to solve the problem.  
Suppose that 10 shrubs cost \$ $N$ .

$$\frac{2}{29} = \frac{10}{N}$$

$$\frac{2}{29} \xrightarrow{\times 5} \frac{10}{145}$$

So,  $N = 145$ .

Ten shrubs cost \$145.

## EXERCISES

Use a proportion to find the value of  $N$ .

- Bob bicycled 17 km in 2 h.  
At the same rate, he could  
travel  $N$  km in 6 h.

$$\frac{17}{2} = \frac{N}{6}$$

- Four bottles of syrup cost \$5.  
 $N$  bottles cost \$15.

$$\frac{4}{5} = \frac{N}{15}$$

- Janet can run 50 m in 9 s.  
At the same rate, she would  
run 100 m in  $N$  s.

$$\frac{50}{9} = \frac{100}{N}$$

Write a proportion.

- John made \$18 in 5 h.  
He could make \$ $N$  in 20 h.
- Alicia drove 230 km in 2 h.  
She could drive  $N$  km in 6 h.
- Two cartons of books have a mass of 45 kg.  
Six cartons have a mass of  $N$  kg.

- Three tubes of toothpaste cost \$4. Nine tubes cost \$ $N$ .

## PRACTICE

Use proportions to solve these problems.

1. Janice earns \$22 in 4 h. How much would she earn in 12 h at that rate of pay?
2. An assembly line can produce 125 radios in 3 h. How long will it take to produce 625 radios at the same rate of production?
3. 5 m of electric cable cost \$2.84. What is the cost of 15 m?
4. On a map, 1 cm represents 25 km.  
What is the real distance between two cities that are 5 cm apart on the map?
5. A recipe that serves 4 people requires 3 eggs. How many eggs are needed if the recipe is to serve 12 people?

# Percent

In Tom's town, 32 out of every 100 people live in houses.

$\frac{32}{100}$  or 0.32 of the people live in houses.

Often this is expressed as **thirty-two percent** or 32%.

**Percent** means "per hundred".

1% is  $\frac{1}{100}$  or 0.01.

100% is  $\frac{100}{100}$  or 1.

200% is  $\frac{200}{100}$  or 2.

## Consumer Problem

Bela gets \$68 take-home pay for every \$100 she earns.

1. What percent of her earnings does her employer keep for taxes and other deductions?
2. Taxes take up 25% of her pay. How much extra is deducted from every \$100 of Bela's pay?

# Fractions and Percents

A recent survey reported that  $\frac{1}{4}$  of all households use "Zed" detergent.

$\frac{2}{5}$  of all households use "Sunshine" detergent.

Val converted these fractions into percents to compare the figures.

$$\frac{1}{4} \begin{matrix} \xrightarrow{\times 25} 25 \\ \xrightarrow{\times 25} 100 \end{matrix} = \frac{25}{100} = 25\%$$

$$\frac{2}{5} \begin{matrix} \xrightarrow{\times 20} 40 \\ \xrightarrow{\times 20} 100 \end{matrix} = \frac{40}{100} = 40\%$$

The results clearly show that "Sunshine" is more popular.

# Percent Equivalents

Discounts are often expressed as fractions as well as percents.

A hardware dealer is reducing all her prices by 25%.

How might she advertise the sale?

$$\frac{25}{100} \xrightarrow{\div 25} \frac{1}{4} = \frac{1}{4}$$

She could advertise all prices as " $\frac{1}{4}$  off regular price".

## Special Sales

To change a fraction to a percent,  
find the equivalent decimal first by division.

$$\begin{array}{r} 0.333\dots \\ 3 \overline{)1.000\dots} \end{array} \quad \frac{1}{3} = 0.33 \text{ to the nearest hundredth.} \\ = 33\% \text{ to the nearest percent.}$$

# Percent of a Number

Ellen bought a new record player for \$300. She had to pay 7% provincial sales tax. How much tax did she pay?

7% of \$300

We can use the decimal form to calculate this.

$$7\% = 0.07$$

$$0.07 \times 300 = 21$$

Ellen paid \$21 in sales tax.

# Reciprocals

Two numbers whose product is 1 are **reciprocals** of each other.

$$\frac{3}{5} \times \frac{5}{3} = \frac{15}{15} = 1$$

$\frac{3}{5}$  and  $\frac{5}{3}$  are reciprocals of each other.

The reciprocal of  $\frac{9}{20}$  is  $\frac{20}{9}$ , because  $\frac{9}{20} \times \frac{20}{9} = \frac{180}{180} = 1$ .

The reciprocal of 6 is  $\frac{1}{6}$ , because  $6 \times \frac{1}{6} = \frac{6}{6} = 1$ .

# Dividing with Fractions

Dana is sewing felt designs on cushions. She has  $\frac{1}{2}$  square of red felt left. She wants to make 3 more cushions. How much red felt can she use on each cushion?

$$\frac{1}{2} \div 3$$

The  $\frac{1}{2}$  square is divided into 3 parts.  
Each new part is  $\frac{1}{6}$  of a whole square.

$$\frac{1}{2} \div 3 = \frac{1}{6}$$

or

Each new part is  $\frac{1}{3}$  of a  $\frac{1}{2}$  square.

$$\frac{1}{2} \times \frac{1}{3} = \frac{1}{6}$$

To **divide** a fraction by a whole number,  
**multiply** by the **reciprocal** of the divisor.

# Dividing by Tenths

Helene is doing cross-stitch embroidery on a towel. The border is 5.1 cm wide. Each row is 0.3 cm wide.

How many rows are in the border?

$$5.1 \div 0.3 = ?$$

$$\frac{5.1}{0.3} = \frac{5.1 \times 10}{0.3 \times 10} = \frac{51}{3}$$

Multiply the divisor and the dividend by 10.

Divide.

$$0.3 \overline{)5.1}$$

$$0.3 \overline{)5.1}$$

$$\begin{array}{r} 17 \\ 3 \overline{)51} \\ \underline{-3} \phantom{0} \\ 21 \\ \underline{-21} \\ 0 \end{array}$$

There are 17 rows in the border.

# Dividing by Hundredths

Louis is cutting pieces of rope so the class can practise tying knots. He is cutting the rope into 0.55 m lengths. He has 13.2 m of rope. How many pieces will he have?

$$13.2 \div 0.55 = ?$$

$$\frac{13.2}{0.55} = \frac{13.2 \times 100}{0.55 \times 100} = \frac{1320}{55}$$

Multiply the divisor and dividend by 100.

Divide.

Check.

$$0.55 \overline{)13.2}$$

$$0.55 \overline{)13.20}$$

$$\begin{array}{r} 24 \\ 55 \overline{)1320} \\ \underline{-110} \phantom{0} \\ 220 \\ \underline{-220} \\ 0 \end{array}$$

$$\begin{array}{r} 24 \\ \times 0.55 \\ \hline 120 \\ 120 \\ \hline 13.20 \end{array}$$

Louis will have 24 pieces of rope.

# Rounding the Quotient

Marikka checked various stores to compare prices of grapefruit.

She calculated the price of **one** grapefruit in each store.

Frederick's Market had the best buy at 6 for \$1.55.

What was the price of one grapefruit at Frederick's?

$$6 \overline{) 1.55}$$

Divide.

$$\begin{array}{r}

22. What is the better buy for oranges — 12 for \$1.69 or 14¢ each?

23. A candle mold holds 0.18 L of wax. How many candles can you make with 3 L of wax?

## USING THE CALCULATOR

Estimate each quotient mentally.

Then divide on a calculator.

Round the quotients to the nearest thousandth.

1.  $0.54 \div 0.7$

2.  $6.98 \div 0.3$

3.  $75.25 \div 0.9$

4.  $68 \div 0.77$

5.  $85.4 \div 0.33$

6.  $69.22 \div 0.54$

7.  $9 \div 1.54$

8.  $55.2 \div 6.35$

9.  $8 \div 0.127$

Find the differences between your estimates and the calculations.

You win the challenge if the sum of your differences is less than 100.

# Expressing Fractions as Decimals

Jennifer likes to use decimals instead of fractions when she uses her calculator. What decimal would she use in a problem that involves multiplying by  $\frac{3}{8}$ ?

$$8 \overline{)3}$$

To change a fraction to a decimal, divide the numerator by the denominator.

$$\begin{array}{r} 0.375 \\ 8 \overline{)3.000} \\ \underline{-24} \phantom{00} \\ 60 \\ \underline{-56} \phantom{0} \\ 40 \\ \underline{-40} \\ 0 \end{array}$$

$$\frac{3}{8} = 0.375$$

What is  $\frac{22}{7}$  to the nearest hundredth?

## Decimal Designs

Express each fraction as a decimal. Divide until you have four decimal places in the quotient. Do not round.

- |                  |                  |                  |                  |                  |
|------------------|------------------|------------------|------------------|------------------|
| a. $\frac{1}{9}$ | b. $\frac{2}{9}$ | c. $\frac{3}{9}$ | d. $\frac{4}{9}$ | e. $\frac{5}{9}$ |
|------------------|------------------|------------------|------------------|------------------|

Notice the pattern. Write the decimal for  $\frac{6}{9}$ ,  $\frac{7}{9}$ ,  $\frac{8}{9}$ .

Express these fractions as decimals. Divide until you have four decimal places. Do not round.

- |                   |                   |                   |                   |                   |

|-------------------|-------------------|-------------------|-------------------|-------------------|

Now write the decimal for  $\frac{6}{11}$ ,  $\frac{7}{11}$ ,  $\frac{8}{11}$ ,  $\frac{9}{11}$ ,  $\frac{10}{11}$ .

# Problem Solving

Julio is three times as old as Rosa.  
In five years, he will be only two times as old.

How old are Julio and Rosa now?

If you are not sure where to begin, choose two reasonable numbers and test them.

Guess: **30** and **10**    Test:    In five years, they will be 35 and 15.  
But     $2 \times 15 \neq 35$ .

Guess: **21** and **7**    Test:    In five years, they will be 26 and 12.  
But     $2 \times 12 \neq 26$ . (**But** — it's closer.)

Guess: **15** and **5**    Test:    In five years, they will be 20 and 10.  
 $2 \times 10 = 20$

Julio is 15 years old and Rosa is 5 years old now.

## EXERCISES

Solve.

1. A number multiplied by itself is 225. What is the number?

$$12 \times 12 = 144 \quad (\text{too small})$$

$$20 \times 20 = 400 \quad (\text{too big})$$

$$17 \times 17 = 289 \quad (\text{too big})$$

2. A rectangular field has an area of  $48 \text{ m}^2$  and a perimeter of 38 m. What are its dimensions?

To have an area of  $48 \text{ m}^2$ , the dimensions could be  $8 \times 6$ , or  $12 \times 4$ , or  $16 \times 3$  or  $48 \times 1$ . Which of these give a perimeter of 38 m?

3. If Larry multiplies his age by 3, adds 6, and divides by 3, the result is 15. How old is Larry?

$$\text{Try 8:} \quad 8 \times 3 = 24; \quad 24 + 6 = 30; \quad 30 \div 3 = 10$$

$$\text{Try 12:} \quad 12 \times 3 = 36; \quad 36 + 6 = 42; \quad 42 \div 3 = 14$$

## PRACTICE

Solve.

1. A craft fair charged \$5 admission for adults and \$2 for children. For the first 150 people admitted, the proceeds were \$600. How many of these people were adults and how many were children?
2. Three years ago, Beth was 3 times as old as Ian. Now she is 8 years older than Ian. How old are Beth and Ian now?
3. I am thinking of a number. If I triple it and then subtract 8, the result is 13. What is the number?
4. Nicole has 8 coins in her purse. They total \$1.15. How many quarters, dimes, and nickels does she have?
5. A rectangular garden has an area of  $36 \text{ m}^2$  and a perimeter of 30 m. What are its dimensions?

## Heights of Players on the Southdale Basketball Team

The shortest player is 145 cm tall.

The tallest player is 160 cm tall.

$$\begin{array}{r} 160 \\ - 145 \\ \hline 15 \end{array}$$

The **range** is 15 cm.

Three of the players are 150 cm tall.

The number that occurs most often is called the **mode**.

The **mode** of the data is 150 cm.

How often do the other heights occur?

## EXERCISES

What is the range of the set of numbers? What is the mode?

1. 12, 13, 15, 15, 18

## Family Studies

Southdale's Grade 6 class conducted a survey on the size of students' families.

- How many families have 2 children? 7 children?
- What is the range for the numbers of children? the mode?
- How many families have fewer children than the mode?
- How many children are there altogether in all the families?
- Can you show how to use a calculator with a memory to solve question 4?

# Mean

The chart gives the daily attendance for the first week of May at Beauport School. What was the **mean** daily attendance?

The **mean** for a set of data is found by dividing the sum by the total number of items.

$$\begin{array}{r}
 418 \\
 422 \\
 417 \\
 425 \\
 + 413 \\
 \hline
 2095
 \end{array}
 \qquad
 \begin{array}{r}
 419 \\
 5 \overline{)2095}
 \end{array}$$

The mean daily attendance for the week was 419. The *mean* is what people often call the **average**. Mean and mode are two types of averages.

## A Mean Age

Diter is 11 years 2 months old. His friends Debbie and Ralph are 10 years 11 months and 11 years 8 months old. What is their mean age? Try to find a short cut for solving this problem.

# The Median

Miss Lindstrom gave a surprise test.  
The marks were 60, 78, 75, 90, 42,  
60, 95, 85, and 70.

Write the marks in order, from  
smallest to largest.

42 60 60 70 75 78 85 90 95

The *middle number* (the 5th number) is 75.  
The middle number is called the **median**.

If there are two middle numbers, the median  
is the number halfway between them.

42 60 60 70 75 77 78 85 90 95

The median is 76.

# Bar Graphs

## EXERCISES

Use the graph to answer the questions.

1. What information is provided by the graph?
2. How is the data for 1976 shown? for 1982?
3. How many people played golf in 1976? in 1982?
4. How many people bicycled in 1976? in 1982?
5. How many people swam in 1976? in 1982?
6. What was the most popular fitness activity in 1976? in 1982?
7. Which two sports had the greatest increase in participation?
8. Did any activity have a decrease in participation?

1. What information is provided by the graph?
2. How is the number of records bought by each group shown?
3. How many comedy records were bought by each group?
4. How many country records were bought by each group?
5. Which type of record was least popular with the older group?
6. Which type was most popular with the younger group?
7. Which types did both groups like about the same?
8. When they were seven years old, Martin and Teresa were both 125 cm tall. When they were nine, Martin was 130 cm and Teresa was 140 cm. When they were eleven, Martin was 150 cm and Teresa was 145 cm. Make a graph to show this.

## Budget Time

Paul and Petra each get a weekly allowance of \$7.00. One week, Paul spent his as follows: bus fare \$1.00, school supplies \$0.50, snacks \$2.30, tickets for entertainment \$2.50, savings \$0.70. Petra spent hers like this: bus fare \$1.80, school supplies \$2.40, snacks \$1.60, tickets for entertainment \$0, savings \$1.20.

Make a graph to show how Paul and Petra spent their allowances.

# Line Graphs

A school superintendent made a graph of the projected enrolment in her district's schools. She joined the dots on the graph with line segments to help show the trends.

## EXERCISES

Use the graph to answer the questions.

1. What does the red line indicate?  
What does the green line indicate?
2. What was the enrolment in Grades K to 6 in 1979? in 1980?
3. What was the enrolment in Grades 7 to 12 in 1980?
4. What is the projected enrolment in Grades K to 6 in 1987?
5. When does the enrolment in Grades 7 to 12 peak?
6. What has been happening to the enrolment in Grades K to 6?

Pat and Pearl kept a graph of their earnings from baby sitting.

7. How are Pearl's earnings indicated? Pat's?
8. How much did Pat earn in week 2? in week 4?
9. What week did Pearl not earn anything?

## PRACTICE

High Temperature at Kelowna and Grande Prairie  
First Week in May

1. What information does the graph show?
2. Give the temperatures for Kelowna and Grande Prairie on Sunday.
3. When was the temperature the lowest for Kelowna?
4. When was the temperature for Kelowna and Grande Prairie the same?
5. Which city had its higher temperatures in the middle of the week?

# Angles

Line segments  $YX$  and  $YZ$  meet at point  $Y$  and form an **angle** at  $Y$ .

It is called angle  $XYZ$  or just angle  $Y$ .

Point  $Y$  is called the **vertex** of the angle.

A **right angle** is formed at the corner (or vertex) of a square or rectangle.

**right angle**  $BCD$

$EFG$  is called a **straight angle** because  $EG$  is a straight line.

Lines or segments that meet at right angles are said to be **perpendicular**.

$PQ$  is perpendicular to  $RS$ .

An **acute angle** is smaller than a right angle.

An **obtuse angle** is larger than a right angle.

## EXERCISES

Is the angle acute, obtuse, right, or straight?

Name the angle using the letters shown.

# PRACTICE

Name all the angles in each figure.

Label each as *obtuse*, *acute*, *right*, or *straight*.

1.

2.

3.

4.

5.

6.

7. List all the angles formed when these two lines **intersect**.  
Describe each angle as obtuse or acute.

8. Trace the figure on the right. Turn the tracing about point  $X$  so that  $D$  is over  $E$  and  $F$  is over  $G$ .  
What do you notice?

3. 11:30

4. 08:15

5. 10:45

6. How many straight angles are formed during a twelve-hour period?

# Measuring Angles

The unit for measuring angles is the **degree**.  
An angle of one degree ( $1^\circ$ ) would look like this.

A **protractor** is used to measure the size of an angle in degrees.

Angle A is  $70^\circ$ .

Angle C is  $130^\circ$ .

Angle XYZ is  $180^\circ$ .

## EXERCISES

What is the size of the angle?

1.

2.

Use a protractor to measure the angle.

3.

4.

5.

6.

7. What is the size of a right angle?
8. Describe an acute angle using degree measures.
9. What is the size of a straight angle?
10. Describe an obtuse angle using degree measures.

## PRACTICE

Measure the angles.

1.

2.

3.

Construct an angle of the given size. Use a protractor.

# Circle Graphs

Frank asked 36 people, "What is your favourite sport?" Then he made a table of values and a circle graph.

Sport	Number of Votes	Fraction of Total	Size of Angle
Hockey	12	$\frac{1}{3}$	$120^\circ$
Baseball	9	$\frac{1}{4}$	$90^\circ$
Basketball	6	$\frac{1}{6}$	$60^\circ$
Soccer	6	$\frac{1}{6}$	$60^\circ$
Football	3	$\frac{1}{12}$	$30^\circ$
TOTAL	36		$360^\circ$

Find the fraction by dividing the number of votes by the number of people.

$$\frac{12}{36} = \frac{1}{3} \quad \frac{9}{36} = \frac{1}{4} \quad \frac{6}{36} = \frac{1}{6} \quad \frac{3}{36} = \frac{1}{12}$$

There are  $360^\circ$  in a full turn. Frank found the size of each angle by multiplying 360 by the fraction.

## EXERCISES

Make a circle graph to show this information.

## A Pizza Puzzle

A medium pizza from Bitondo's has a radius of 20 cm.

If the pizza is cut into 10 equal pieces, what is the angle formed by each piece?

$$\frac{1}{10} \times 360^\circ = 36^\circ$$

What is the area of one piece?

$$\frac{36}{360} \times \pi R^2 \text{ (Use } \pi = 3.14.)$$

Copy and complete the chart.

# Ordered Pairs

Each **axis** of the grid is a number line.  
The two **axes** are perpendicular.

The point where the number lines intersect is called the **origin**.

To locate the point for the ordered pair (5, 3):

1. Start at the origin.
2. Move 5 units to the right
3. and then 3 units up.

## EXERCISES

Write the letter name  
for the ordered pair.

- |           |           |
|-----------|-----------|
| 1. (3, 1) | 2. (1, 3) |
| 3. (7, 2) | 4. (0, 4) |
| 5. (5, 5) | 6. (6, 3) |
| 7. (0, 0) | 8. (4, 0) |

Write the ordered pair  
for each point.

- |       |       |
|-------|-------|
| 9. A  | 10. B |
| 11. C | 12. D |
| 13. E | 14. F |

# PRACTICE

1. Use the grid to decode the message.

# Problem Solving

## Using Smaller Numbers

Together John and Len have \$115.

John has four times as much money as Len.

How much does each boy have?

This problem seems simpler if you start with smaller numbers.

Suppose Len has \$1. Then John has \$4. That makes \$5 in all.

It is clear that Len has  $\frac{1}{5}$  of the money, and John has  $\frac{4}{5}$ .

So Len has  $\frac{1}{5} \times \$115 = \$23$ .

John has the rest:  $\$115 - \$23 = \$92$  or  $\frac{4}{5} \times \$115 = \$92$ .

## Restate the Problem: Break It into Simpler Parts

Last year, Cedar Golf Club charged a \$600 membership fee and \$10 for each game of golf. This year a membership costs \$650 and the golfing fee is \$6. How many times must you golf to make the new rates better?

Answer a series of simpler problems by using a chart.

	Member- ship fee	+ 1 Golf fee	+ 2 Golf fees	+ 3 Golf fees	+ 12 Golf fees	+ 13 Golf fees
Last year	600	610	620	630	720	730
This year	650	656	662	668	722	728

You must golf at least 13 times to make the new rates better.

## EXERCISES

Solve.

- Mary and Jean have \$132 together.  
Mary has half as much as Jean.  
How much does each girl have?
- There are 4 roads from Aston to Bart, 3 from Bart to Coutts,  
2 from Coutts to Dole, and 5 from Dole to Endlane.  
How many ways are there of travelling from Aston to Endlane?

## PRACTICE

Solve.

1. The membership fee in a tennis club was raised from \$300 to \$375. The cost per game was reduced from \$8 to \$5. After how many games are the new rates better?
2. Three boxes hold 105 model cars. Box B stores double that of box A and half that of box C. How many cars does each box store?

# Slides

Marta is opening the patio door.

The motion of the door is called a **slide**.

Point A is at (2, 5) on the first grid.

When we *slide* 2 to the right and 3 down, we will be at point B, (4, 2).

The green arrow shows a single slide from A to B that we describe as 2 right, 3 down. Point B (4, 2) is called the **slide image** of point A.

## EXERCISES

What is the image of point A (2, 5) after each slide?

1. right 3
2. right 3, down 2
3. right 4, down 3
4. right 4, down 4
5. left 1
6. left 1, down 1
7. left 1, up 1
8. right 3, up 2

Describe each slide. (For example, ■ left, ■ down.)

Name the ordered pair of the slide image for each vertex.

# PRACTICE

Describe each slide.

Name the ordered pair of the slide image for each vertex.

5. Trace triangle **a**. Find its slide image. Describe the slide.  
Repeat for triangles **b**, **c**, and **d**.

## Parallelogram Areas

Study the picture to find the area of the figure.

What is the area?

# Symmetry

Trace the tree or use a *MIRA*.  
Fold the tracing (or place the *MIRA*) along the dotted line.  
If one part fits on the other, the picture has **line symmetry**.  
The crease is called a **line of symmetry**.

line of symmetry

Two parts fit.

MIRA

Line **a** is a line of symmetry.  
Line **b** is **not** a line of symmetry.

Lines **c** and **d** are both lines of symmetry.  
This figure has other lines of symmetry.

Neither line **e** nor **f** is a line of symmetry.

## EXERCISES

Which line is a line of symmetry in each picture?

1.

2.

3.

4.

Trace each figure. Draw all the lines of symmetry.

5.

6.

7.

8.

## PRACTICE

Use tracings or a *MIRA*.

Name each figure and tell how many lines of symmetry it has.

## ABCDEFGHIJKLMNOPQRSTUVWXYZ

10. List the capital letters of the alphabet that have 1 line of symmetry.
11. List the capital letters of the alphabet that have 2 lines of symmetry.
12. Do any letters have more than two lines of symmetry?
13. Which vowels have at least one line of symmetry?

## Snowflakes

How many lines of symmetry are there in each snowflake?

# Flips

We can **flip** a triangle over a line.

Triangle  $DEF$  is the **flip image** of triangle  $ABC$ .

Point  $D$  is the image of  $A$ .  
Point  $E$  is the image of  $B$ .  
Point  $F$  is the image of  $C$ .

Using a grid, check the distance of each point from the flip line.

$A$  and  $D$  are 3 units from the flip line.  
 $B$  and  $E$  are 4 units from the flip line.  
 $C$  and  $F$  are 1 unit from the flip line.

## EXERCISES

Does the diagram suggest a flip?

1.

2.

3.

4.

5. Name the ordered pairs for the vertices of the flip image of triangle  $XYZ$  over the black line.

# PRACTICE

Name the matching pairs of points for each object and its flip image.

Name the ordered pair for each vertex of the flip image.

## Palindromes and Flips

A palindrome is a word or phrase that is spelled the same backwards and forwards.

ANNA

PEEP

NEVER ODD OR EVEN

Some palindromes can be flipped and still look the same.

OTTO | OTTO    AVA | AVA    MOM | MOM

Make up other palindromes.

Try to make more palindromes that look the same when flipped.

# Turns

A figure can **turn** about a point.

These pictures show the images of a figure being turned **clockwise**.

Q is the **turning point**.

After a **full turn**, the image will be back in the same position as the object.

## EXERCISES

Write  $\frac{1}{4}$  turn,  $\frac{1}{2}$  turn, or  $\frac{3}{4}$  turn for each clockwise turn about Q.

Write the ordered pair for the image of A.

# PRACTICE

Write  $\frac{1}{4}$  turn,  $\frac{1}{2}$  turn, or  $\frac{3}{4}$  turn for each clockwise turn about Q.

Write the ordered pair for each point after a half turn about Q.

10. What is the size of the angle in a  $\frac{1}{4}$  turn? a  $\frac{1}{2}$  turn? a  $\frac{3}{4}$  turn?

# REVIEW

- G1 1. Name the ordered pair for the image of point A after a slide of right 1, up 4.
- G2 2. Which is a line of symmetry for triangle ABC: the green line or the red line?
- G3 3. Name the ordered pair for the image of A after a flip over the green line.
- G4 4. Name the ordered pair for the image of B after a  $\frac{1}{4}$  turn clockwise about C.

# Slides, Flips, and Turns

In each picture, the red figure is the image of the black figure.

This image results from a slide of right 2, up 3.

$$A(4,1) \longrightarrow B(6,4)$$

This image results from a flip over the black line.

$$C(3,2) \longrightarrow D(5,2)$$

This image results from a  $\frac{1}{2}$  turn about point P.

$$E(1,1) \longrightarrow F(5,5)$$

## EXERCISES

Is the image produced by a slide, flip, or turn?

# PRACTICE

Is the image produced by a slide, flip, or turn?

Find the image of triangle A after these motions.

4. after a flip over the red line
5. after a slide to the right
6. after a  $\frac{1}{2}$  turn about P
7. after a slide of right 8, down 4
8. after a flip over the green line
9. after a  $\frac{1}{4}$  turn clockwise about P

## Special Combinations

Figure B is the image of figure A after a turn **and** then a flip.

How is figure B produced from figure A in each diagram?

# Congruence

If a tracing of a figure fits exactly on a second figure, then the two figures are **congruent**.

Trace the first triangle and **slide** the tracing over the second triangle. If it fits, the triangles are congruent.

Trace the first triangle and **flip** the tracing onto the second triangle. If it fits, the triangles are congruent.

Trace the first triangle and **turn** the tracing onto the second triangle. If it fits, the triangles are congruent.

The tracing can be moved through any combination of slides, flips, and turns to test for congruence.

## EXERCISES

Using tracings to test for congruence.

# PRACTICE

1. Use tracings to find congruent triangles.

2. Which triangle is a slide image of the first triangle?(Use tracing paper.) Which is the flip image? Which is the turn image?

3. Draw a right triangle on grid paper. Then draw a triangle that is the slide image of the first triangle.
4. Draw another right triangle. Then draw a triangle that is its flip image.
5. Draw another right triangle. Then draw a triangle that is its turn image.

## Tracing Challenge

Trace the figure without lifting your pencil from the paper and without retracing any lines.

# Congruence

## congruent segments

Point  $A$  matches point  $C$ .

Point  $B$  matches point  $D$ .

## congruent angles

Angle  $X$  matches angle  $Y$ .

## congruent triangles

Matching vertices and angles:  $M$  and  $P$

$N$  and  $Q$

$O$  and  $R$

Matching sides:  $MN$  and  $PQ$

$NO$  and  $QR$

$MO$  and  $PR$

Matching parts of congruent figures are called **corresponding** parts.

## EXERCISES

Name the corresponding vertices, angles, and sides in each pair of congruent triangles.

# PRACTICE

Study the congruent triangles and complete the statements.

Segment  $AB$  is congruent to  $\blacksquare$ .  
 Angle  $C$  is congruent to  $\blacksquare$ .  
 Triangle  $ABC$  is congruent to  $\blacksquare$ .

Segment  $GI$  is congruent to  $\blacksquare$ .  
 Angle  $K$  is congruent to  $\blacksquare$ .  
 Triangle  $JKL$  is congruent to  $\blacksquare$ .

Segment  $RT$  is congruent to  $\blacksquare$ .  
 Angle  $R$  is congruent to  $\blacksquare$ .  
 Triangle  $RST$  is congruent to  $\blacksquare$ .

4. Guess and test: In triangles  $ABC$  and  $DEF$ , sides  $AB$  and  $DE$  are congruent. Angles  $A$  and  $D$  are congruent. Angles  $B$  and  $E$  are congruent. Are the two triangles congruent?

# REVIEW

# Lines and Angles

Line segments  $AB$  and  $BC$  meet (intersect) to form angle  $ABC$ .

When two lines intersect at right angles, they are called **perpendicular** lines. They form  $90^\circ$  angles.

The bottom of a door and one side of the door are **perpendicular**.

When two lines will never intersect, they are called **parallel** lines.

These symbols are used for parallel lines.

The opposite edges of a door are **parallel**.

## EXERCISES

Write a statement about each figure, such as " $AB$  is parallel to  $CD$ ."

1.

2.

3.

4.

5.

6.

7.

8.

## PRACTICE

In each figure, name the perpendicular segments and the parallel segments.

Complete each statement. (Use a real box and label the vertices.)

7. a. Segments  $CD$  and  $DF$  are  $\blacksquare$ .
- b. Segments  $CD$  and  $EF$  are  $\blacksquare$ .
- c. Segments  $CE$  and  $DF$  are  $\blacksquare$ .
- d. Segments  $AB$  and  $CD$  are  $\blacksquare$ .
- e. Segments  $AB$  and  $BC$  are  $\blacksquare$ .
- f. Segments  $AG$  and  $GF$  are  $\blacksquare$ .
- g. Segments  $AG$  and  $CE$  are  $\blacksquare$ .

## MIRA Constructions

Draw a line and label it  $a$ .

Use a *MIRA* to construct a line perpendicular to  $a$ .

Use a *MIRA* to construct a line parallel to  $a$ .

Use a *MIRA* to construct a rectangle.

Use a *MIRA* to construct a square.

# Triangles

Some triangles have special names.

A **right triangle** has one right angle.

An **isosceles triangle** has 2 congruent sides. It also has two congruent angles.

An **equilateral triangle** has 3 congruent sides. It also has 3 congruent angles.

The sum of the angles of any triangle is  $180^\circ$ .

$$60^\circ + 90^\circ + 30^\circ = 180^\circ$$

## EXERCISES

Is the triangle isosceles, right, or equilateral?  
Use tracing paper to find out.

## PRACTICE

What type of triangle is it? Why?

1. Sides: 4 cm, 8 cm, and 8 cm
2. Sides: 8.2 cm, 3.5 cm, and 8.2 cm
3. Sides: 5.5 cm, 5.5 cm, and 5.5 cm
4. Each side is 5 m long.
5. Angles:  $45^\circ$ ,  $45^\circ$ , and  $90^\circ$
6. Angles:  $35^\circ$ ,  $90^\circ$ , and  $55^\circ$

What is the size of the third angle?

9.

10.  $20^\circ$ ,  $30^\circ$

11.  $35^\circ$ ,  $35^\circ$

12.  $70^\circ$ ,  $80^\circ$

13.  $29^\circ$ ,  $41^\circ$

14.  $100^\circ$ ,  $40^\circ$

15.  $37^\circ$ ,  $58^\circ$

16. What is the size of each angle of an equilateral triangle?

17. What is the size of each angle of an isosceles right triangle?

## Triangles and Symmetry

1. Trace each isosceles triangle.

- a. Draw a line of symmetry for each isosceles triangle.
- b. Write a statement about lines of symmetry of isosceles triangles.

2. Trace each equilateral triangle.

- a. Draw the lines of symmetry for each equilateral triangle.
- b. Write a statement about lines of symmetry of equilateral triangles.

# Quadrilaterals

Some quadrilaterals have special names.

A **rectangle** is a right-angled parallelogram.

A **parallelogram** is a quadrilateral whose opposite sides are parallel. Its opposite sides are also congruent.

A **square** is a rectangle with four congruent sides. A **square** is a right-angled rhombus.

A **rhombus** is a parallelogram with four congruent sides.

## EXERCISES

What is a special name for each quadrilateral?

1.

2.

3.

4.

5.

6.

## PRACTICE

1. Draw a parallelogram that isn't a rectangle or rhombus.
2. Draw a rectangle that isn't a square.
3. Draw a rhombus that isn't a square.
4. Draw a square and label it  $ABCD$ .
5. How many lines of symmetry do the figures you drew above have?

True or false.

6. A square is a parallelogram.
7. A rhombus is a rectangle.
8. A rectangle is a parallelogram.
9. A square is a rectangle.
10. These quadrilaterals are **trapezoids**.
  - a. Write a statement describing a trapezoid.
  - b. True or false: A trapezoid is a parallelogram.
  - c. True or false: A parallelogram is a trapezoid.

# Temperature

Temperatures *below* zero are marked on a thermometer in the **opposite direction** to temperatures *above* zero.

The colder it gets, the lower the temperature.

10°C means 10° **above** zero.

−10°C, or *minus* 10°C, means 10°C **below** zero.

## EXERCISES

Use the thermometer on the right. What is the temperature at each point?

- |      |      |      |      |

# Positive and Negative Numbers

The scale on a thermometer is an example of a number line.

On the number line, numbers above zero are **positive**.

For example, **+4** is **positive four**.

Numbers below zero are **negative**.

For example, **-4** is **negative four**.

**+4** and **-4** are **opposites**.

They are the same distance from zero, but in **opposite** directions.

A number line can also be horizontal.

Numbers to the *left* of 0  
are *negative*.

Numbers to the *right* of 0  
are *positive*.

## EXERCISES

What number is at each letter on the number line?

1. A
2. B
3. C
4. D
5. E
6. F

What is the missing number?

Name the opposite of each number.

11. +5
12. -6
13. +10
14. -75
15. -43

## PRACTICE

What are the missing numbers?

Copy and complete using "right" or "left" for a horizontal number line.

7.  $+3$  is to the ☐ of  $-3$

8.  $-7$  is to the ☐ of  $-6$

9.  $-5$  is to the ☐ of  $-10$

10.  $+12$  is to the ☐ of  $+8$

Solve.

11. If  $+5$  shows 5 km east, what number shows 4 km west?

12. If  $-200$  shows 200 m below sea level, what does  $+325$  show?

13. If  $+25$  shows \$25 received, what number shows \$10 spent?

14. If  $-15$  shows 15 points lost, what does  $+8$  show?

15. If  $-8$  shows 8 s before blast-off, what number shows 3 s after blast-off?

16. If  $+4$  shows members gained, what does  $-3$  show?

17. If  $-10$  shows  $10^\circ$  clockwise, what number shows  $30^\circ$  counterclockwise?

## Using Your Head

Solve the problem. Use a number line if you wish.

1. Ted and Tina are standing beside each other. Ted walks 3 m forward. Tina walks 4 m in the opposite direction. How far apart are they?

2. Julius Caesar was born in 100 B.C. Attila was born about 406 A.D. How many years apart were they born?

3. Amsterdam is about 600 km west of Berlin. Warsaw is about 550 km east of Berlin. How far apart are Amsterdam and Warsaw?

# The Integers

Each number on the number line is called an **integer**.

The collection of all the negative numbers, zero, and all the positive numbers is called **the integers**.

For any two integers on a horizontal number line:

The integer on the *left* is  
**less than** the integer on the right.

$$+3 < +8$$

$$-3 < +1$$

$$-6 < -5$$

The integer on the *right* is  
**greater than** the integer on the left.

$$+6 > +4$$

$$+2 > -3$$

$$-4 > -7$$

## EXERCISES

Name the next three integers.

### Profile of Land and Continental Shelf

10. What is the elevation at *A*? *B*? *D*? *E*?
11. What is the elevation at *F*? *G*? *H*?
12. How many metres higher is *B* than *C*?
13. How many metres deeper is *H* than *G*?
14. What is the difference in elevation between points *C* and *F*?

Solve.

15. The greatest known depth of the Mediterranean Sea is  $-4632$  m and of the Caribbean Sea,  $-6946$  m. Which sea is deeper? By how much?
16. Which is better, to have  $-10$  or  $-5$  dollars in your account?

## The Bottom of the Sea

Make a bar graph to show the maximum depth of these lakes.

Lake Victoria	82 m	Lake Winnipeg	62 m
Lake Aral	68 m	Lake Nicaragua	70 m
Lake Chad	7 m	Lake Urmia	15 m

# Positive and Negative Coordinates

The horizontal and vertical number lines divide the grid into four parts.

Points are located on the grid as shown.  $A (+3, -2)$  means, starting from the origin, go 3 right and 2 down to locate  $A$ .

$B (-2, +4)$  means, starting from the origin, go 2 left and 4 up to locate  $B$ .

## EXERCISES

Name the integer at the point.

1.  $A$     2.  $B$     3.  $C$     4.  $D$     5.  $E$
6.  $F$     7.  $G$     8.  $H$     9.  $I$     10.  $J$

Name the point located by the ordered pair.

11.  $(+1, +2)$     12.  $(-3, +1)$
13.  $(+2, -1)$     14.  $(-3, -2)$
15.  $(-1, +2)$     16.  $(+4, 0)$

Write the ordered pair for the point.

17.  $V$     18.  $W$
19.  $X$     20.  $Y$

# PRACTICE

Name the point located by the ordered pair.

- |               |               |
|---------------|---------------|
| 1. $(+4, +5)$ | 2. $(-5, +5)$ |
| 3. $(+3, -5)$ | 4. $(-2, +2)$ |
| 5. $(-4, -4)$ | 6. $(-2, -2)$ |

Write the ordered pair for the point.

- |         |         |
|---------|---------|
| 7. $F$  | 8. $G$  |
| 9. $I$  | 10. $J$ |
| 11. $K$ | 12. $L$ |

13. Draw horizontal and vertical number lines on grid paper.

Graph these points:  $L (+4, -4)$ ,  $M (-2, +5)$ ,  $N (-3, -4)$ .

## Code Your Own

On a coordinate grid, print your initials or those of a friend. Make up a code for the initials using ordered pairs. When you want the person following the code to lift his or her pencil and start a new line, draw a  $\Delta$ .

Here is an example.

$(-5, +3) (-5, -3) \Delta (-1, +3)$   
 $(-1, -3) \Delta (-5, 0) (-1, 0) \Delta$   
 $(+1, +3) (+1, -3) \Delta (+1, +3)$   
 $(+5, -3) \Delta (+5, +3) (+5, -3) \Delta$

# Using Patterns

A supermarket manager wants to build a square pyramid with cans of apple juice. The bottom layer is to be 8 cans wide.

How many cans will the display use?

## Solution

Work backwards and find a pattern.

Start with the top layer and figure out the pattern.

on the top, 1 can

next layer, 2 cans wide, or 4 cans ( $2 \times 2$ )

next layer, 3 cans wide, or 9 cans ( $3 \times 3$ )

next layer, 4 cans wide, or 16 cans ( $4 \times 4$ )

8 layers

The pyramid will use  $1 + 4 + 9 + 16 + 25 + 36 + 49 + 64$   
or 204 cans.

## EXERCISES

Copy each pattern and show the next three numbers or figures.

1. 1, 3, 5, 7, 9, ...

2. 4, 8, 12, 16, ...

3. 1, 2, 4, 8, 16, ...

5. 1, 2, 4, 12, 48, ...

6. 1, 4, 3, 6, 5, 8, ...

7. ...

8.  $1, \frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \dots$

9. ...

10. ...

## PRACTICE

Solve by using a pattern.

1. A store is ordering sales brochures. The printer charges \$15 for 100 brochures, \$20 for 200, \$25 for 300, and so on. How much will 600 brochures cost?
2. Complete the pattern:  
 $-10^{\circ}\text{C}$ ,  $-9^{\circ}\text{C}$ ,  $-7^{\circ}\text{C}$ ,  $-4^{\circ}\text{C}$ ,  $\blacksquare^{\circ}\text{C}$ .
3. Pierre made a deal with his parents about his homework. If he does his homework on time, they agree to pay him 1¢ the first day, 2¢ the second day, 4¢ the third day, 7¢ the next day, 11¢ the next day, and so on. If Pierre does his homework on time for 10 days, how much money will he receive altogether?

## REVIEW

# Tiling Patterns

Congruent figures can sometimes cover a surface without gaps or overlapping.

The pattern is called a **tessellation**.

## EXERCISES

Will the figure tile a surface?

# PRACTICE

Trace each figure over and over until your page is covered.

How many figures will be in the next pile?

## Clowning Around

Trace the picture of the clown.

Cover the surface of your page with tracings of the clown.

# Similar Figures

Figures that have exactly the same shape (but may be different sizes) are called **similar figures**.

Angle **A** is the same size as angle **D**.  
 Angle **B** is the same size as angle **E**.  
 Angle **C** is the same size as angle **F**.

**Corresponding angles** of similar figures are equal.

## EXERCISES

## Down Under

Use 1 cm square grid paper to copy the map. What country is it?

# Scale Drawings

This drawing of the first floor of a house uses the **scale 1:100** (one to one hundred). That is, 1 cm on the drawing represents 100 cm (or 1 m) of the real floor. Look at the drawing to see how the scale is shown.

Scale:

1 cm = 6 cm

The drawing of the book uses the scale 1:6. The drawing of the book is 3 cm long. So, the real length of the book is  $6 \times 3 \text{ cm} = 18 \text{ cm}$ .

## EXERCISES

1. The drawing of the dining room is 3 cm wide. How wide is the real dining room?
2. The drawing of the living room is 5 cm long. How long is the real living room?
3. How wide and how long is the drawing of the kitchen?
4. What are the measurements of the real kitchen?
5. How long is the real house? How wide is it?
6. How wide is the drawing of the book?
7. How wide is the real book?
8. How many times bigger are the measurements of the real book?
9. Suppose the scale was 1:7. What would be the measurements of the real book?

## PRACTICE

Solve.

The scale is 1:3.

- How long is the real eraser?
- How wide is the real box of tissues?

The scale is 1:5.

- How long is the real pencil?
- How tall is the real cup?

- A scale is 1:2. How long is the real object if the drawing is 1 cm? 2 cm? 3 cm? 4 cm?
- A scale is 1:4. How long is the real object if the drawing is 1 mm? 1 cm? 2 cm? 5 cm?
- Copy and complete.

Scale	Drawing	Real Object

1:5		25 cm
	2 cm	4 cm

## Scaling Down

Helen's back yard is 30 m long and 20 m wide. She wants to make a map of it that will fit in this rectangle. What scale should she use? What will the length and width of her map be?

# Two-Step and Three-Step Problems

Rita had prints made of pictures taken at a class outing. Each print cost her 67¢. She had 35 prints made and sold them to classmates at 75¢ each.

How much money did she make?

## Solution A

Step 1: Cost of 35 prints at 67¢ each.

$$35 \times \$0.67 = \$23.45$$

Step 2: Selling price of 35 prints at 75¢ each.

$$35 \times \$0.75 = \$26.25$$

Step 3: Profit =  $\$26.25 - \$23.45$   
= \$2.80

Rita made \$2.80 profit.

## Solution B

Step 1: Profit on each print.

$$\$0.75 - \$0.67 = \$0.08$$

Step 2: Profit on 35 prints.

$$35 \times \$0.08 = \$2.80$$

## EXERCISES

Complete the steps in solving the problem.

1. Jacob bought 2 packs of paper at 89¢ each and a notebook for \$2.95. What was the total cost?

Step 1: Cost of paper:  $2 \times \$0.89 = \blacksquare$

Step 2: Total cost:  $\$2.95 + \blacksquare = \blacksquare$

2. A section of an auditorium has 11 rows with 12 seats in each row. The tickets for the seats in this section cost \$5. If the section is filled, how much money is taken in?

Step 1: Total number of seats:  $11 \times 12 = \blacksquare$

Step 2: Money taken in:  $\blacksquare \times \$5 = \blacksquare$

3. A wall of a building measures 30 m by 6 m. One can of paint costs \$21.95 and will cover 60 m<sup>2</sup>. How much will it cost to paint the wall?

Step 1: Area of the wall:  $\blacksquare$

Step 2: Number of cans of paint needed:  $\blacksquare$

Step 3: Cost of paint:  $\blacksquare$

## PRACTICE

Solve.

1. George and Jenny budgeted \$1500 for a vacation. They plan to spend \$378 on lodging, \$225 on food, and \$769 on transportation. How much money will be left for other items?
2. A daily interest savings account with \$10 000 in it earned \$4.11 a day for the first 9 days of June. The interest rate went up and it earned \$4.25 a day for the next 21 days. How much interest did the account earn in June?
3. Chang had 3 h to do as he pleased. He read for an hour, dozed for 20 min, talked to a friend for 20 min, and played tennis for 40 min. How much time did he have left?
4. Tony mowed lawns for 3 h and was paid \$2/h. He cleaned a basement in 2.5 h and was paid \$2.50/h. How much money did he earn?
5. Christine babysits for \$1.50/h. She can usually babysit 6 h/week. How many weeks will it take her to earn \$50?

# Adding Fractions

In the school cafeteria, Mrs. Kates cut each pan of lasagna into 24 pieces. She served 8 pieces to the first group of students and 10 pieces to the next group. What fraction of the first pan of lasagna was served?

$$\frac{8}{24} + \frac{10}{24} = \frac{18}{24}$$

But  $\frac{18}{24}$  can be written in simpler terms.

$$\frac{18}{24} = \frac{18 \div 6}{24 \div 6} = \frac{3}{4}$$

$\frac{3}{4}$  of the first pan of lasagna was served.

# Different Denominators

You can add  $\frac{1}{3}$  and  $\frac{1}{6}$  even though the denominators are different.

Rewrite a fraction so the denominators are the same.

Add.

Simplify.

So,  $\frac{1}{3} + \frac{1}{6} = \frac{1}{2}$

6 is a **common denominator** for  $\frac{1}{3}$  and  $\frac{1}{6}$ .

19. Nina has \$1.50 for lunch money. She spent 50¢ for a sandwich and 25¢ for milk.  
What fraction of her lunch money did she spend for the sandwich? for the milk? for the sandwich and milk together?

## Garden Patches

- Mr. Schuster tends  $\frac{1}{2}$  of the garden.  
What fraction does Francis tend? Ingrid? Peter? Marta?
- What fraction of the garden do Francis and Ingrid tend together?
- What fraction of the garden do Francis, Ingrid, and Peter tend together?
- What fraction of the garden do Mr. Schuster, Peter, and Marta tend together?

# Different Denominators

Sometimes both fractions must be rewritten before they can be added.  
Find the **least common denominator**.

multiples of 2: 2, 4, 6, 8, **10**

multiples of 5: 5, **10**

**10** is the least common denominator (LCD).

$$\frac{1}{2} + \frac{1}{5}$$

Rewrite the fractions.

Add.

Then simplify the answer if possible.

8.  $\frac{3}{8} + \frac{5}{6}$

9.  $\frac{2}{3} + \frac{1}{10}$

A64

10.  $3\frac{1}{3} + 2\frac{1}{4}$

11.  $15\frac{3}{5} + 11\frac{3}{5}$

12.  $21\frac{7}{10} + 8\frac{3}{4}$

# Subtracting Fractions

Rewrite a fraction  
using LCD.

Subtract.

Simplify.

$$\begin{array}{r} \frac{5}{6} \\ - \frac{1}{2} \\ \hline \end{array}$$

$$\begin{array}{r} \frac{5}{6} \\ - \frac{3}{6} \\ \hline \end{array}$$

$$\begin{array}{r} \frac{5}{6} \\ - \frac{3}{6} \\ \hline \frac{2}{6} \end{array}$$

$$\frac{2}{6} = \frac{1}{3}$$

So,  $\frac{5}{6} - \frac{1}{2} = \frac{1}{3}$

$$\frac{5}{6} - \frac{4}{6} = \frac{1}{6}$$

## Fraction ABCs

1. A, B, and C represent three different numerals between 1 to 9. What are they?

$$\frac{1}{A} + \frac{1}{B} + \frac{1}{C} = 1$$

2. P and Q represent two different numerals between 1 and 9. What are they?

$$\frac{P}{Q} - \frac{Q}{P} = \frac{P+Q}{P \times Q}$$

# Probability

There is one chance in three of spinning red.

The **probability** of red is  $\frac{1}{3}$ .

There are two chances in four of spinning green.

The probability of green is  $\frac{2}{4}$  (or  $\frac{1}{2}$ ).

Probability =  $\frac{\text{number of expected outcomes}}{\text{number of possible outcomes}}$

## EXERCISES

Find the probability.

1. The probability of green is  $\frac{\blacksquare}{3}$ .
2. The probability of orange is  $\frac{\blacksquare}{3}$ .
3. The probability of white is  $\frac{\blacksquare}{3}$ .

experiment

Victor rolled a die. What is the probability he rolled a 6? an even number?

Use a model.

The probability of rolling a 6 is  $\frac{1}{6}$ .

The probability of rolling an even number is  $\frac{3}{6}$  or  $\frac{1}{2}$ .

## EXERCISES

Use a model or a diagram to solve the problem.

- How many different squares are there in this diagram?

- What is the probability of getting two heads when you toss two coins?  
Hint. Show all the possible outcomes.

- How many different ways are there to walk from A to B without retracing your steps?

## PRACTICE

Use a model or a diagram to solve.

1. Ted walked 2 km north, then 3 km east. Then he walked 1.5 km south, 2 km west, and 0.5 km south. How far is he from where he started?
2. How many tiles 2 cm by 3 cm can be put in a frame 7 cm by 11 cm? (No overlapping.)
3. There are four red socks and six blue socks in a drawer. You pull out a blue sock. What is the probability of picking another blue sock?
4. How many square metres of carpet will Mary need to cover her room?

## Word Problems

Solve.

1. In the 1980-81 crop year, Canada exported the following number of million tonnes of grain: West Coast ports, 9.564; Churchill, 0.289; Thunder Bay, 10.465; Atlantic ports, 0.73. How many million tonnes of grain did Canada export in 1980-81?
2. Let  $a = 1$ ,  $b = 2$ ,  $c = 3$ ,  $d = 4$ , and so on. Find the sum of the letters in the word "examination".
3. An airline advertised a special return fare of \$357.50 from Edmonton to Montreal. The regular fare is \$577.50. How much will 2 adults save by taking advantage of the cheaper fare?
4. A trust company paid  $19\frac{3}{4}\%$  interest on a one-year deposit of \$5000.00. What was the amount of interest paid for the year?
5. In the North American Soccer League, the Vancouver Whitecaps had 168 points after 30 games. What was the average number of points per game?
6. Grain exports through the port of Churchill were 0.523 million tonnes in 1979-80 and 0.289 million tonnes in 1980-81. How many more million tonnes were shipped in 1979-80 than in 1980-81?
7. The Toronto Stock Exchange Index closed at 2334.33 points on Thursday and 2310.61 points on Friday. How many points down from Thursday was the Friday index?
8. An airplane leaves Calgary at 13:05 and arrives in Toronto at 18:30. There is a 2 h time difference between Calgary and Toronto. How long is the flight?
9. A 24-can case of juice costs \$10.08. The juice regularly sells at 2 cans for \$0.89. How much money is saved by buying the case?

10. A group of students collected pennies for their favourite charity. The first day they collected 3 pennies. Each day they collected 3 times as many as the day before.
  - a. How many pennies did they collect on the fifth day?
  - b. How much money did they collect in all five days?
11. The Nile river is 6632 km long. The St. Lawrence river is 3440 km long. How much longer than the St. Lawrence is the Nile?
12. An elevator in a Paris apartment building was installed in 1883. How long has the elevator been in operation?
13. The price of a tire for the Langleys' car was \$53.45. How much would a set of 4 tires cost?
14. A student whose mass is 32 kg on Earth would have a mass of approximately 896 kg on the Sun. How many times more is that?
15. The area of Prince Edward Island is approximately 5657 km<sup>2</sup>. The area of Newfoundland is about 71.5 times that of Prince Edward Island. What is the approximate area of Newfoundland?
16. A pair of ice skates was advertised at 20% off the regular price. The regular price was \$31.95.
  - a. What is the amount the skates have been reduced?
  - b. What is the sale price of the skates?
17. A city newspaper costs \$0.25 a day on Monday through Thursday and \$0.50 a day on Friday and Saturday. How much does the paper cost for four weeks?
18. In its first 5 softball games, the school team scored 9, 5, 12, 3, and 6 runs. The team won 4 games and lost only 1. What was the average number of runs scored per game?
19. The Grade Six class of King Richard School collected 1148 bottle tops for an art project. There were 28 students in the class. How many bottle tops did each student have?
